
Contents

1	Thermodynamic Behavior. Ensembles	1
1.1	<i>Thermodynamic Systems</i>	1
1.2	<i>Classical Systems and Ensembles</i>	3
1.3	<i>Quantum Systems and Ensembles</i>	7
1.4	<i>Equilibrium States and Thermodynamic Functions</i>	11
2	The Thermodynamic Limit for Thermodynamic Functions: Lattice Systems	13
2.1	<i>Limit of an Infinite Volume</i>	13
2.2	<i>Interactions of Quantum Lattice Systems</i>	15
2.3	<i>Thermodynamic Limit for Quantum Lattice Systems</i>	18
2.4	<i>Thermodynamic Limit for Classical Lattice Systems</i>	20
2.5	<i>Some Inequalities for Quantum Systems</i>	25

3	The Thermodynamic Limit for Thermodynamic Functions: Continuous Systems	29
3.1	<i>Interactions of Classical Continuous Systems</i>	29
3.2	<i>Stable Interactions</i>	33
3.3	<i>Thermodynamic Limit for the Configurational Microcanonical Ensemble</i>	41
3.4	<i>Thermodynamic Limit for the Classical Ensembles</i>	52
3.5	<i>Thermodynamic Limit for the Quantum Ensembles</i>	60
	<i>Bibliographical Note</i>	68
	<i>Exercises</i>	68
4	Low Density Expansions and Correlation Functions	71
4.1	<i>Definitions</i>	71
4.2	<i>The Method of Integral Equations</i>	72
4.3	<i>Mayer Series and Virial Expansion</i>	83
4.4	<i>The Algebraic Method</i>	86
4.5	<i>Positive Potentials</i>	93
4.6	<i>Quantum Systems</i>	97
4.7	<i>Construction of a Hilbert Space</i>	100
	<i>Bibliographical Note</i>	104
	<i>Exercises</i>	104
5	The Problem of Phase Transitions	108
5.1	<i>The Theorem of Lee and Yang</i>	108
5.2	<i>Absence of Phase Transitions at High Temperature</i>	112
5.3	<i>Existence of a First-Order Phase Transition at Low Temperature</i>	113
5.4	<i>The Griffiths Inequalities</i>	119
5.5	<i>The Theorem of Mermin and Wagner</i>	129
5.6	<i>One-Dimensional Systems</i>	134
5.7	<i>The Notion of Phase Transition</i>	142
	<i>Bibliographical Note</i>	142
	<i>Exercises</i>	143

Contents	xiii
6 Group Invariance of Physical States	145
6.1 <i>Description of the State of an Infinite System</i>	145
6.2 <i>Invariant States</i>	147
6.3 <i>Ergodic States</i>	154
6.4 <i>Decomposition of Invariant States into Ergodic States</i>	156
6.5 <i>Pure Thermodynamic Phases as Ergodic States</i>	161
<i>Bibliographical Note</i>	163
<i>Exercises</i>	164
7 The States of Statistical Mechanics	168
7.1 <i>B*-Algebras for Classical and Quantum Statistical Mechanics</i>	168
7.2 <i>Entropy</i>	178
7.3 <i>Thermodynamic Limit of States</i>	184
7.4 <i>A Variational Principle</i>	187
7.5 <i>The Gibbs Phase Rule</i>	190
7.6 <i>Time Evolution of Quantum Lattice Systems and the Kubo–Martin–Schwinger Boundary Condition</i>	192
<i>Bibliographical Note</i>	196
<i>Exercises</i>	197
Appendix Some Mathematical Tools	198
A.1 <i>Some Terminology</i>	198
A.2 <i>Generalities on B*-Algebras</i>	199
A.3 <i>States on B*-Algebras</i>	201
A.4 <i>Von Neumann Algebras</i>	205
A.5 <i>Integral Representations on Convex Compact Sets</i>	206
A.6 <i>Groups with an Invariant Mean</i>	208
