Preface	v
Preface to the Second Edition	vii
1. Introduction	1
References	4
2. Material Properties	7
2.1. Introduction	7
2.2. The Lubricant	7
2.2.1. Viscosity	7
2.2.2. Kinematic Viscosity (ν)	9
2.2.3. Effect of Temperature	9
2.2.4. Viscosity Index	10
2.2.5. Effect of Pressure on Viscosity	11
2.2.6. Density	15
2.2.7. Refractive Index	16
2.2.8. Thermal Conductivity	16
2.2.9. Non-Newtonian Behaviour	17
2.2.10. Lubricant Solidification at High Pressures	19
2.3. The Bounding Surfaces	19
2.4. The Elastic Behaviour Within the Bodies	26
2.5. Closure	26
Notation	26
References	27

3. Elastostatic Contacts	29
3.1. Introduction	29
3.2. Non-Conforming Contact Elastostatics	30
3.3. Hertzian Contact Theory	30
3.3.1. Assumptions	30
3.3.2. Geometry Equation	31
3.3.3. Elastic Displacement	32
3.4. Axisymmetric Pressure Distribution	33
3.5. Contact Between Spherical Surfaces	37
3.6. Line Contact	38
3.7. Line Contact Between Cylindrical Surfaces	42
3.8. General Case of Touching Point Contact	44
3.9. Footprints Having Only One Axis of Symmetry	50
3.10. Contact Between Regular Wavy Surfaces	50
3.11. Closure	53
Notation	54
Dimensionless variables	55
References	55
4. The Governing Equations of Elastohydrodynamic Lubrication	57
4.1. Introduction	57
4.2. The Reynolds Equation	57
4.2.1. Assumptions made in the Derivation of the Reynolds Equation	58
4.2.2. Equilibrium of Forces on a Lubricant Element	59
4.2.3. Velocity Distribution	60
4.2.4. Mass Continuity	61
4.3. Special Forms of the Reynolds Equation	64
4.4. The Reynolds Equation in Polar Coordinates	67
4.5. The Energy Equation	69
4.6. The Lubricant Film Geometry Equation	72
4.7. The Elastic Deflection Equation	73
4.8. The Lubricant Equations of State	75
4.9. The Load Equation	75
4.10. The Governing Dimensionless Groups	75
Notation	79

Dimensionless variables and groups	80
References	80
5. Simple Concepts of Non-Conforming Contact	
Lubrication	83
5.1. Introduction	83
5.2. Lubrication of Rigid Line Contacts	83
5.2.1. Pressure Distribution	83
5.2.2. Load	88
5.2.3. Inlet Boundary Conditions	89
5.2.3.1. The Partially Flooded Inlet Boundary	89
5.2.3.2. The Starved Inlet Boundary	93
5.2.4. Outlet Boundary Conditions	94
5.2.4.1. The Swift–Steiber (SS) Boundary Condition	94
5.2.4.2. The Separation Exit Boundary Condition	96
5.2.5. Rigid Piezoviscous Line Contacts	96
5.3. Lubrication of Rigid Point Contacts	98
5.3.1. Pressure Distribution	99
5.3.2. Load	101
5.3.3. Rigid Piezoviscous Point Contacts	102
5.3.4. Load at which Surface Deformation becomes Important	103
5.4. Experimental Evidence	104
5.5. An Approximate Theory of Elastohydrodynamic Lubrication	107
5.5.1. Introduction	107
5.5.2. Grubin’s Solution for Ehd Line Contacts	108
5.5.3. The Load-Bearing and Exit Zone in Ehd Line Contacts	112
5.5.4. Point Contact Approximate Solutions	117
5.6. An Approximate Theory for Rough Surfaces Elastohydrodynamic Lubrication	121
5.6.1. Introduction	121
5.6.2. Steady State Analysis	121
5.6.3. Transient Analysis	126
5.7. Closure	131
Notation	132
Dimensionless variables	134
Suffixes	135
References	135

6. Numerical Methods for Determining Oil Film Thickness and Pressure Distribution in Elastohydrodynamic Lubrication	139
6.1. Introduction	139
6.2. Assumptions	139
6.3. Governing Equations Used for the Numerical Solutions	140
6.3.1. Elastic Deflection	140
6.3.1.1. Flat-Roofed Pressure Elements	141
6.3.1.2. Quadratic Surface Roofed Pressure Elements	145
6.3.2. Film Shape	147
6.3.3. Equations of State of the Lubricant	149
6.3.3.1. Density	149
6.3.3.2. Viscosity	149
6.3.4. Reynolds Equation	149
6.3.4.1. Finite Difference Form of the Reynolds Equation	152
6.3.5. Load	153
6.4. Solution Methods	154
6.4.1. Introduction	154
6.4.2. The Forward Iterative Method	155
6.4.2.1. Boundary Conditions	155
6.4.2.2. Initial Condition	155
6.4.2.3. Computation Algorithm	155
6.4.2.4. Convergence Criteria and Number of Elements Used	157
6.4.2.5. Relaxation Factors	157
6.4.2.6. Computing Time and Units Used	158
6.4.3. Inverse Solution Method	158
6.4.4. Other Solution Methods	162
6.4.4.1. The Newton–Raphson Method (NR)	162
6.4.4.2. Introduction to the Multigrid Method	163
6.5. Closure	164
Notation	164
Dimensionless variables	165
Suffixes	166
References	166

7. Film Thickness and Pressure Distribution in Elastohydrodynamic Lubrication	169
7.1. Introduction	169
7.2. Results for the Lubricant Film Thickness in Ehd Line Contacts .	169
7.2.1. Film Geometry (Infinite Line Contacts)	169
7.2.2. Film Geometry (Finite Line Contacts)	171
7.2.3. Ehd Line Contact Film Thickness Formulae	174
7.2.3.1. Formulae for Oil Film Thickness (Line Contacts)	174
7.2.4. Comparison of Theoretical Predictions with Experimental Results	178
7.3. Results for the Lubricant Film Thickness in Ehd Point Contacts .	181
7.3.1. Film Geometry	181
7.3.2. Ehd Point Contact Film Thickness Formulae	186
7.3.3. Comparison of Experimental Results with Theoretical Predictions	190
7.3.3.1. Results at High Maximum Pressures	192
7.3.3.2. Some Results Using Multigrid and Multi-Level Multi-Integration Methods	193
7.4. Regimes of Lubrication in Point and Line Contacts	194
7.4.1. Point Contacts	194
7.4.2. Line Contacts	197
7.5. Lubricant Thermal and Starvation Effects in Ehl	198
7.5.1. Thermal Effects (Flooded Contacts)	198
7.5.2. Starvation Effects (Isothermal)	203
7.5.3. Combined Thermal and Starvation Effects	207
7.6. Ehl of Rough Surfaces	208
7.6.1. Partial Ehl	208
7.6.2. Early Research on Micro Ehl	216
7.6.2.1. Waviness Features on a Stationary Surface . . .	216
7.7. Closure	218
Notation	219
Dimensionless variables and groups	220
Suffixes	222
Abbreviations	222
References	222

8. Friction and Non-Linear Lubricant Behaviour in Elastohydrodynamic Contacts	225
8.1. Introduction	225
8.2. Newtonian Treatment of Friction	226
8.2.1. Rigid-Isoviscous Conditions	226
8.2.2. Rolling Friction in Ehd Isothermal Contact	230
8.2.3. Friction in Ehd Sliding Contacts	235
8.2.4. Effect of Temperature	236
8.3. A Rheological Model for the Lubricant	242
8.3.1. Introduction	242
8.3.2. Viscoelastic Model	242
8.3.3. The Limiting Shear Stress	246
8.3.4. Disk Machine Experiments	247
8.4. Application to Practical Ehd Contacts	254
8.4.1. Thermal Effects	254
8.4.2. Regimes of Friction Maps	258
8.5. The Reynolds–Eyring Equation	259
8.6. Closure	266
Notation	267
Subscripts for the rheological model	269
Dimensionless groups	269
References	271
9. Stress and Fatigue in Elastohydrodynamic Contacts	273
9.1. Introduction	273
9.2. Stresses Under Ehd Contacts	276
9.2.1. Orthogonal Stresses	276
9.2.2. Failure Stress Hypotheses	278
9.2.2.1. Maximum Shear Stress Hypothesis	278
9.2.2.2. Alternating Orthogonal Shear Stress Hypothesis	282
9.2.2.3. Deformation Energy Hypothesis	283
9.3. Life Prediction	284
9.3.1. Lundberg and Palmgren’s Model	284
9.3.2. Effect of Ehl on Fatigue Life	290
9.3.2.1. Complete Ehd Film	290
9.3.2.2. Partial Ehd Film	292

9.3.2.3.	Localized Stress Field Below Asperities	295
9.3.3.	Unified Life Models	297
9.3.3.1.	Descriptions of the Modifying Factors	298
9.3.3.2.	Effect of Ehl on Life Model	300
9.3.3.3.	Effect of Debris Denting on the Fatigue Life of Rolling Element Bearings	303
9.4.	Life of Gears	303
9.5.	Closure	305
9.6.	Appendix	305
9.6.A.	Computation of Orthogonal Shear Stresses	305
Notation		308
Dimensionless variables		309
References		310
10.	Experimental Methods in Elastohydrodynamics	313
10.1.	Introduction	313
10.2.	Measurement of Friction Force	314
10.3.	Vacuum-Deposited Transducers	318
10.3.1.	Measurement of Pressure Distribution	318
10.3.2.	Temperature Measurement	320
10.3.3.	Measurement of Film Thickness	320
10.3.4.	Methods of Deposition	322
10.3.4.1.	Vacuum Deposition	322
10.3.4.2.	Sputtering	322
10.3.4.3.	The Mask	322
10.3.5.	Direct Laser Milling of the Transducer	322
10.3.6.	Calibration	323
10.3.7.	The Electric Circuit	323
10.4.	Measurement of the Ehd Film by Interferometry	324
10.4.1.	Introduction	324
10.4.2.	Two-Beam Interferometry	325
10.4.3.	Multiple-Beam Interferometry	327
10.4.4.	Measuring the Film Thickness	328
10.4.5.	Further Interferometry Applications	330
10.4.5.1.	Coloured Fringes	330
10.4.5.2.	Light of Two Discrete Wavelengths (Duochromatic System)	330

- 10.4.6. Ultra-Thin Films 332
- 10.4.7. Ultra-Thin Ehl Films Between Rough Surfaces 335
- 10.5. Thermography 337
- 10.6. Methods of Detecting the Presence of Ehd Films 338
 - 10.6.1. Electrical Resistance 338
 - 10.6.2. 'Before and after' inspection 339
- 10.7. Closure 339
- References 339

11. Some Advanced Numerical Methods for Determining the Oil Film Thickness in Elastohydrodynamic Lubrication 341

- 11.1. Multigrid (Multi-Level) and Multi-Level Multi-Integration Methods 341
 - 11.1.1. Introduction 341
 - 11.1.2. The Multigrid Method 343
 - 11.1.3. The Multigrid Algorithm 344
 - 11.1.4. The Non-Linear Full Approximation Scheme 346
 - 11.1.5. Intergrid Operators 347
 - 11.1.6. Cycling Strategies 349
 - 11.1.7. Application of Multigrid Methods to Time-Dependent Problems 351
 - 11.1.8. The Multi-Level Multi-Integration Method (MLMI) 352
- 11.2. Numerical Methods to Solve Ehl Problems 355
 - 11.2.1. The Governing Equations 355
 - 11.2.2. Discretization of the Governing Equations 356
 - 11.2.2.1. Reynolds Equation 356
 - 11.2.2.2. The Film Thickness Equation 357
 - 11.2.2.3. Equations of State 358
 - 11.2.2.4. The Load Balance Equation 358
 - 11.2.3. Relaxation Schemes 358
 - 11.2.4. The Effective Influence Newton Method (EIN) 363
 - 11.2.5. Time-Dependent Problems 364
- 11.3. Application of Multigrid and Multi-Level Multi-Integration to Ehl Problems 365
- 11.4. Results 366
 - 11.4.1. Introduction 366
 - 11.4.2. A Single Depression on a Moving Surface 366

11.4.3. Wavy Features on a Moving Surface	370
11.4.4. Roughness Features on a Stationary Surface	373
11.4.5. Ehl Transient Problems for Smooth Surfaces	376
11.5. Closure	383
Notation	384
Multigrid and MLMI terms	385
Dimensionless variables	385
Abbreviations	386
References	386
12. Various Topics Related to Elastohydrodynamics	389
12.1. Introduction	389
12.2. Application of Ehl to Gear Tooth Contacts	389
12.2.1. Introduction	389
12.2.2. Geometry	392
12.2.3. Kinematics	393
12.2.4. Load	394
12.2.4.1. Criterion for Determining Validity of the Quasi- Steady Solution	394
12.2.5. Example	395
12.2.5.1. Temperature and Friction	398
12.3. Roller Bearings with Spherical-Ended Elements	401
12.3.1. Accommodation of Axial Loads	401
12.3.2. Estimation of Minimum Film Thickness	404
12.3.2.1. Contact Geometry	404
12.3.2.2. Ehd Film Thickness	406
12.3.3. Applications	409
12.4. Rebounding Lubricant Layers	410
12.5. Variable Speed Transmissions	418
12.6. Ehd Films as Vibration Dampers	420
12.6.1. Vibrations of Rolling Element Bearings	420
12.6.2. Governing Equations	421
12.6.2.1. The Integrated Pressure Under a Ball	421
12.6.2.2. The Second Governing Equation	423
12.6.2.3. The Elastic Deflection Equation	425
12.6.3. Vibration Response	425
12.7. Ehd Lubrication of Impacting Non-Conforming Surfaces	427

12.8. Closure	434
12.9. Appendix	434
12.9.A. Navier–Stokes Equations	434
12.9.A.1. Reynolds Equation	436
References	436
13. Future Trends in Ehl	439
13.1. Rough Surface and Partial Ehl	439
13.2. Gear Lubrication	439
13.3. Ehl Treated as Part of a System	440
13.4. The Effect of Wear Debris on the Fatigue Life of Rolling Bearings	440
13.5. Transient Ehl	440
13.6. Experimental Techniques	441
13.7. Abnormal Phenomena	441
13.8. Closure	441
Index	443
