

CONTENTS

PREFACE	9
CHAPTER 1	
INTRODUCTION	13
<i>Hynek Biederman</i>	
1.1. History	13
1.2. What is a Plasma Polymer?	14
1.3. Deposition Systems for Plasma Polymerization	16
1.4. Deposition (Plasma) Process Parameters	20
1.5. Models of Plasma Polymerization	20
1.6. Types of Plasma Polymers and their Characterization	21
1.7. Conclusions	22
References	22
CHAPTER 2	
PLASMA DEPOSITION OF FLUOROPOLYMER FILMS IN DIFFERENT GLOW DISCHARGE REGIMES	25
<i>Pietro Favia</i>	
2.1. Introduction	25
2.2. On the Jargon of PE-CVD Processes	26
2.3. Continuous, Afterglow and Modulated PE-CVD	27
2.3.1. <i>Fluorocarbon Monomers</i>	28
2.4. Diagnostic Techniques for PE-CVD Processes of Fluoropolymers	29
2.4.1. <i>Surface and Bulk Analysis</i>	30
2.4.2. <i>Plasma Diagnostic Techniques</i>	31
2.5. Active Species in Fluorocarbon Plasmas	33
2.5.1. <i>Additives to Drive the F/CF_x Density Ratio of a Fluorocarbon Discharge</i>	34
2.6. Relevant Parameters in PE-CVD Processes of Fluoropolymers	37
2.6.1. <i>Ion Bombardment and Substrate Temperature</i>	37
2.6.2. <i>Power, Flow Rate, Pressure and Combined Parameters</i>	39
2.6.3. <i>Distance of the Substrate from the Glow</i>	40
2.6.4. <i>Duty Cycle and Period in Modulated Plasmas</i>	42
2.7. The Activated Growth Model	46

2.8. Applications of Plasma-Deposited Fluoropolymers	48
2.8.1. <i>Wettability of Fluorocarbon Coatings and Applications for Textiles and Paper</i>	48
2.8.2. <i>Biomedical Applications Proposed for Plasma-Deposited Fluoropolymers</i>	50
2.9. Conclusive Remarks	51
Acknowledgements	51
References	52

CHAPTER 3

DEPOSITION OF SILICON CONTAINING FILMS AND FTIR DIAGNOSTICS

Yvan Segui and Patrice Raynaud

3.1. Introduction	57
3.2. Precursors	58
3.3. Species Detected in Organosilicon Plasmas	62
3.3.1. <i>Optical Emission Spectroscopy (OES)</i>	62
3.3.2. <i>Mass Spectroscopy</i>	64
3.3.3. <i>Infrared Absorption Spectroscopy of the Plasma</i>	69
3.3.3.1. Principles of FTIR Diagnostic of the Plasma Phase	69
3.3.3.2. The Absorption Spectra	70
3.3.3.3. Quantitative Analysis (Absorption Spectrometry)	71
3.3.3.4. Infrared Diagnostics of Organosilicon Plasma	72
3.4. Open Questions and Conclusions	76
3.4.1. <i>Species in the Gas Phase</i>	76
3.4.2. <i>Interface Plasma-Surface; Growing Mechanisms</i>	77
References	79

CHAPTER 4

CORPUSCULAR DIAGNOSTICS OF PLASMA POLYMERIZATION PROCESSES

Michael Zeuner

4.1. Corpuscular Diagnostics in Plasma Processing	85
4.2. Basic Processes in Particle Interaction	86
4.2.1. <i>Gas Discharge Phenomena</i>	87
4.2.2. <i>Plasma Sheath Effects</i>	89
4.2.3. <i>Surface Interaction</i>	92

4.3. Experimental Equipment for Corpuscular Diagnostics	95
4.3.1. <i>Common Particle Collection by Film Deposition</i>	96
4.3.2. <i>Mass Spectrometrical Methods</i>	99
4.3.3. <i>Energy Filter Techniques</i>	105
4.4. Neutral Species Detection	109
4.4.1. <i>Neutral Flux Detection and Partial Pressure Analysis</i>	109
4.4.2. <i>Threshold Ionisation Mass Spectrometry</i>	113
4.4.3. <i>Electron Attachment Mass Spectrometry</i>	116
4.5. Process Ion Detection	117
4.5.1. <i>RF Plasma Processing</i>	118
4.5.2. <i>RF Sputter Deposition</i>	124
4.5.3. <i>Microwave Plasma Processing</i>	127
4.5.4. <i>Negative Ion Detection</i>	129
4.5.5. <i>Pulsed Plasma Operation</i>	131
4.5.6. <i>Plasma Ion Mass Spectra</i>	135
References	137

CHAPTER 5

ELECTRICAL AND OPTICAL PROPERTIES OF PLASMA POLYMERS

143

Jacek Tyczkowski

5.1. Introduction	143
5.2. Electronic Structure	144
5.2.1. <i>Theoretical Models</i>	144
5.2.2. <i>Experimental Methods</i>	148
5.2.2.1. <i>Optical Spectra</i>	148
5.2.2.2. <i>Internal Photoemission</i>	151
5.2.2.3. <i>Photoelectron Spectroscopies</i>	154
5.2.2.4. <i>Electrical Transport Methods</i>	158
5.3. Amorphous Semiconductors	162
5.3.1. <i>Band Model</i>	162
5.3.2. <i>Doping</i>	164
5.3.3. <i>Alloying</i>	167
5.3.4. <i>Charge Carrier Transport</i>	170
5.4. Amorphous insulators	174
5.4.1. <i>Band Model</i>	174
5.4.2. <i>Electrical Conductivity</i>	177
5.4.2.1. <i>Charge Carriers</i>	178
5.4.2.2. <i>Generation Mechanisms</i>	179
5.4.2.3. <i>Transport Mechanisms</i>	182

5.5. Amorphous Insulator – Amorphous Semiconductor Transition	183
5.6. Electronic Properties and Potential Applications	187
5.6.1. <i>Electrical Properties</i>	187
5.6.1.1. Low Conducting Films	189
5.6.1.2. High Conducting Films	190
5.6.1.3. Intermediately Conducting Films	192
5.6.2. <i>Optical and Optoelectronic Properties</i>	196
5.6.2.1. Coatings and Films for Optical Devices	196
5.6.2.2. Integrated Optics	198
5.6.2.3. Optoelectronic Devices	199
5.6.3. <i>Current Problems</i>	203
References	205

CHAPTER 6

PULSED PLASMA POLYMERIZATIONS 217

Richard B. Timmons and Andrew J. Griggs

6.1. Introduction	217
6.1.1. <i>Controlling Film Chemistry during Plasma Polymerizations</i>	217
6.1.2. <i>The Pulsed Plasma Approach</i>	219
6.2. Experimental Considerations	221
6.2.1. <i>Power Input Considerations</i>	222
6.2.2. <i>Film Formation Rates</i>	223
6.2.3. <i>Mean Roughness of Polymer Films Deposited under Pulsed Operation</i>	224
6.2.4. <i>Film Adhesion and Film Stability</i>	225
6.3. Results	226
6.3.1. <i>Some Examples of Film Chemistry Control under Pulsed Plasma Conditions</i>	227
6.3.2. <i>Film Formation Rates</i>	231
6.3.3. <i>Polymerization under Ultra Low Power Input Conditions</i>	233
6.3.4. <i>Film Composition Obtained under Equivalent Power Input Conditions during Pulsed and CW Plasma Polymerizations</i>	234
6.4. Applications	236
6.4.1. <i>Biomaterials</i>	236
6.4.2. <i>Thin Layer Adhesives</i>	238
6.4.3. <i>Synthesis of Super Hydrophobic Surfaces</i>	239
6.4.4. <i>Low Dielectric Constant Films</i>	239
6.4.5. <i>Electrically Conductive Polymers</i>	240

6.5. Discussion	241
Acknowledgements	242
References	242
CHAPTER 7	
DEGRADATION AND STABILITY OF PLASMA POLYMERS	247
<i>Andreas Holländer and Jörg Thome</i>	
7.1. Introduction	247
7.2. Mechanisms of Polymer Degradation	248
7.2.1. <i>General Considerations</i>	249
7.2.2. <i>Thermal Degradation</i>	249
7.2.2.1. Hydrocarbon Polymer	250
7.2.2.2. Oxygen Containing Polymers	252
7.2.2.3. Aromatic Structures	255
7.2.2.4. Fluoropolymers	255
7.2.2.5. Silicone Polymers	256
7.2.3. <i>Oxidation</i>	256
7.2.4. <i>Photooxidation</i>	259
7.3. The Degradation of Plasma Polymers	260
7.3.1. <i>Structural Characteristics of Plasma Polymers</i>	260
7.3.1.1. General Considerations	260
7.3.1.2. Plasma Polymer Coatings	262
7.3.2. <i>Aging of Plasma Polymers in Air</i>	263
7.3.2.1. Hydrocarbon Plasma Polymers	263
7.3.2.2. Oxygen Containing Plasma Polymers	264
7.3.2.3. Nitrogen Containing Plasma Polymers	265
7.3.2.4. Fluoroaromatic Plasma Polymers	266
7.3.2.5. Siloxane and Silazane Plasma Polymers	266
7.3.2.6. Thermal Degradation of Plasma Polymers	267
7.3.2.7. Photooxidation of Plasma Polymers	268
7.3.3. <i>General Features of Plasma Polymer Degradation</i>	269
7.4. Preparation of Stable Plasma Polymers	270
7.4.1. <i>Reduction of the Radical Concentration</i>	270
7.4.1.1. Copolymerization	270
7.4.1.2. Thermal Annealing	270
7.4.1.3. Quenching of Trapped Radicals	271
7.4.2. <i>Design Rules for Stable Plasma Polymers</i>	271
7.5. Conclusions	272
References	273

CHAPTER 8	
APPLICATION OF ATMOSPHERIC PRESSURE DISCHARGE FOR PLASMA POLYMER PROCESSES	279
<i>Masuhiko Kogoma</i>	
8.1. Introduction	279
8.2. Experimental	280
8.3. Results and Discussion	281
8.3.1. <i>FTIR and Emission Spectra</i>	281
8.3.2. <i>Mass Spectrometry of C₂H₄ and C₂F₄ in He APG Discharge</i>	283
8.3.3. <i>TEOS deposition by APG Plasma</i>	285
References	287

CHAPTER 9	
HARD PLASMA POLYMERS, COMPOSITES AND PLASMA POLYMER FILMS PREPARED BY RF SPUTTERING OF CONVENTIONAL POLYMERS	289
<i>Hynek Biederman, Pavel Kudrna and Danka Slavínská</i>	

9.1. Introduction	289
9.2. Hard Plasma Polymer and Hard Carbon Films	290
9.3. Composite Metal/Plasma Polymer Films	294
9.3.1. <i>Deposition Techniques</i>	295
9.3.1.1. Simultaneous Plasma Polymerization and Sputter-etching using an rf Discharge	295
9.3.1.2. Simultaneous Plasma Polymerization of an Organic Gas and Evaporation of a Metal	296
9.3.1.3. Plasma Polymerization of Metal Organic Compounds	296
9.3.1.4. Co-sputtering from Composite Metal/Polymer Target	296
9.3.1.5. Dc planar Magnetron Sputtering and Simultaneous Plasma Polymerization	297
9.3.2. <i>Structure and Morphology of the Composite Films</i>	298
9.3.3. <i>Deposition Process and Composite Film Growth</i>	299
9.3.4. <i>Basic Physical Properties – Characterization</i>	301
9.3.4.1. Structure, Morphology and Composition	301
9.3.4.2. Optical Properties	305
9.3.4.3. Electrical Properties	305
9.3.4.4. Mechanical Properties	307
9.3.4.5. Aging	307
9.3.5. <i>Complex Composite Films</i>	308

9.4. Plasma Polymer Films Prepared by rf Sputtering	309
9.4.1. Fluorocarbon Plasma Polymers	310
9.4.2. Hydrocarbon Plasma Polymers	314
9.5. Conclusions	317
Acknowledgements	317
References	317

CHAPTER 10

BIOMEDICAL APPLICATIONS OF PLASMA-DEPOSITED THIN FILMS	325
<i>Kathryn J. Kitching, Vicki Pan and Buddy D. Ratner</i>	

10.1. Introduction	325
10.2. Biocompatibility: Relationship to Plasma Deposited Films	326
10.3. Applications for Cell and Tissue Culture	328
10.4. Applications for Controlled Release	334
10.5. Applications for Biosensors and Electrodes	337
10.6. Applications for Implanted and Blood-Contacting Biomaterials	342
10.7. Applications for Contact Lenses	350
10.8. Non-fouling Coatings	357
10.9. Plasma Surface Treatments For Biorecognition	361
10.10. Patterned Plasma-Deposited Films	363
10.11. Perspectives and Conclusions	366
Acknowledgements	367
References	367
