

Contents

Preface	vii
1 Introduction	1
Part I	
The Inductive Method	
2 Coproducts	17
3 The Bialgebra \mathcal{C} of Class Functions	25
Part II	
Noncommutative Character Theory of the Symmetric Group	
4 Shapes	35
5 The Bialgebra \mathcal{P} of Permutations	43
6 Frames	53
7 Epimorphisms	61
8 The Coplactic Algebra \mathcal{Q}	65
9 The Main Theorem	75
Part III	
Classical Character Theory of the Symmetric Group	
10 Irreducible Characters	83
11 The Murnaghan–Nakayama Rule	89

12	Young Characters	97
13	The Littlewood–Richardson Rule	107
14	Foulkes Characters and Descent Characters	111
15	Cyclic Characters and the Free Lie Algebra	117
Appendix A. Elements of Representation Theory		125
A.1	Semi-simple Algebras	126
A.2	Finite Group Characters, the Basics	130
A.3	Orthogonality Relations	134
Appendix B. Solomon’s Mackey Formula		139
Appendix C. Young tableaux and Knuth relations		143
C.1	Young Tableaux	144
C.2	Carpets	147
C.3	A Counting Argument	153
C.4	The Greene Invariant	156
Bibliography		159
Index of Symbols		165
Index		169
