<i>Preface</i>	vii
1. Preliminaries on Coxeter groups	1
1.1 Historical background and motivation	1
1.2 Coxeter systems and Coxeter groups	3
1.2.1 A combinatorial definition	3
1.2.2 A geometric definition	5
1.2.3 Examples	7
1.3 Basic properties of Coxeter groups	10
1.3.1 Reflections	10
1.3.2 Lengths of words and geodesics	10
1.3.3 Parabolic subgroups	12
1.3.4 The Deletion Condition	14
1.4 Van Kampen diagrams	15
1.5 Other geometric viewpoints: the Coxeter complex and the Davis complex	20
1.5.1 Simplicial complexes	21
1.5.2 The Coxeter complex	22
1.5.3 The Davis complex	24
1.5.4 The metric on Σ	27
1.6 Exercises	30
2. Further properties of Coxeter groups	33
2.1 The (co)homology of a Coxeter group	33
2.1.1 Group (co)homology	34
2.1.2 Poincaré duality	36

2.2	Normalizers and centralizers	36
2.2.1	The normalizer of a parabolic subgroup	37
2.2.2	Centralizers in Coxeter groups	39
2.3	Visual decompositions of Coxeter groups	42
2.3.1	Graph-of-groups decompositions	42
2.3.2	Visual decompositions	44
2.4	The Word and Conjugacy Problems	45
2.5	Exercises	49
3.	Rigidity	51
3.1	Rigidity and related conditions	51
3.1.1	Rigidity and strong rigidity	51
3.1.2	Reflection independence	52
3.1.3	Reflection rigidity and strong reflection rigidity	53
3.1.4	Classes of Coxeter groups	53
3.2	Some first results	54
3.2.1	Right-angled Coxeter groups	55
3.2.2	The role of reflections	56
3.3	Even Coxeter groups	59
3.4	Large-type and two-dimensional Coxeter groups	63
3.5	Related issues	65
3.5.1	Automorphisms of right-angled Coxeter groups	65
3.5.2	Automorphisms of more general Coxeter groups	66
3.5.3	Artin groups	68
3.6	Exercises	69
4.	In the beginning: some early results	71
4.1	Rigidity of right-angled Coxeter groups	71
4.2	A slight generalization	73
4.3	Strong rigidity through homological conditions	75
4.3.1	The conditions HM_n and PM_n	75
4.3.2	Fixed point sets and the nerve of (W, S)	77
4.3.3	The action of (W, S') on Σ	79
4.3.4	Completing the proof	83
4.3.5	$\text{Aut}(W)$	86
4.4	Two-dimensional groups	86
4.5	Exercises	88
5.	Even Coxeter groups	89

5.1	The structure of even Coxeter groups	89
5.2	Conjugate simplices in even systems	92
5.3	Reflection rigidity in even groups	95
5.4	Reflection preservation and reflection independence	100
5.5	The Isomorphism Problem for even Coxeter groups	106
5.5.1	The algorithm	106
5.5.2	Matching edges between even and non-even diagrams	107
5.5.3	Finding u''	113
5.6	Exercises	117
6.	More general groups	119
6.1	Large-type Coxeter systems	119
6.1.1	The chamber system associated to a Coxeter system	120
6.1.2	The chamber system $Ch(W, S)$ and reflection subgroups of W	122
6.1.3	Universal root systems	125
6.1.4	The first case: \mathcal{V} is edge-connected	126
6.1.5	The general case: applying visual decompositions	129
6.2	Circuits and centralizers	132
6.2.1	Walking around a circuit	132
6.2.2	Centralizer chasing in even Coxeter systems	134
6.2.3	The first case: \mathcal{V} is a simple circuit	135
6.2.4	The general case	137
6.3	Exercises	140
7.	Refinements and generalizations: automorphisms and Artin groups	143
7.1	Automorphisms of right-angled groups	143
7.1.1	The group $Spe(W)$	143
7.1.2	What does $Spe(W)$ look like?	148
7.2	Coxeter systems with \mathcal{V} complete	149
7.2.1	A chain of subgroups of $Aut(W)$	150
7.2.2	The first step	151
7.2.3	The second step	152
7.2.4	A quick aside: properties of the Tits cone	153
7.2.5	The proof of Theorem 7.4	155
7.3	Dehn twists and decompositions: $Aut(W)$ for some large-type groups	158

7.3.1	Centralizer chasing and visual decompositions: reprise	159
7.3.2	The ratios of conjugating elements	161
7.3.3	The unit graph and the structure of an automorphism	164
7.4	Artin groups	166
7.4.1	Rigidity of Artin groups	166
7.4.2	Automorphisms of Artin groups	167
7.5	Exercises	168
<i>Bibliography</i>		171
<i>Index</i>		175
