<i>Preface</i>	vii
1. Introduction	1
1.1 Complex Plasmas in Nature, Laboratory and Technology	1
1.1.1 Dust particles in plasmas	1
1.1.2 Weakly coupled and strongly coupled dusty plasmas	7
1.1.3 Experiments on complex plasmas	8
1.2 New Paradigms and Directions of Complex Plasma Research	11
2. Basics of Plasma-Dust Particle Interactions	17
2.1 Fundamentals of Dust Charging, Main Forces on the Grains and Dust Levitation	18
2.1.1 Negatively and positively charged grains	18
2.1.2 Charging by plasma currents	23
2.1.2.1 Orbit Motion Limited approximation	23
2.1.2.2 Charging of small and non-spherical particles	28
2.1.3 Particle charge — a new kinetic variable	30
2.1.3.1 Dust charging rate	30
2.1.3.2 Kinetic theory of dusty plasmas with variable charge	31
2.1.4 Main forces acting on dust particles in a plasma . . .	35
2.1.5 Dust levitation in a collisionless sheath region	38
2.2 Developments of the Theory of Dust Charging	42
2.2.1 Charging dynamics and charge fluctuations	42

2.2.2	Charging in the plasma stream	43
2.2.3	Effect of trapped ions on dust charging and shielding	45
2.2.4	Charge as a function of the grain size	48
2.3	Interactions of Grain Particles with Ion Flows	52
2.3.1	Ion wake behind a charged point-like particle	55
2.3.2	Dust Cooper pairing: Hamiltonian description	60
2.3.3	Wakes behind dipoles and non-spherical particles	65
2.3.3.1	Wakes behind dipoles	66
2.3.3.2	Wakes behind elongated particles (rods)	69
2.3.4	Subsonic plasma wakes	73
2.3.5	Simulations on plasma wakes	80
2.3.5.1	Wake of a single test particle	82
2.3.5.2	Wake of two particles	85
3.	Production and Diagnostics of Complex Plasmas	93
3.1	Discharge Plasmas	95
3.1.1	RF-capacitive systems	97
3.1.2	DC discharges	98
3.1.2.1	Sheath	99
3.1.2.2	Striations	102
3.1.2.3	Double layers	103
3.1.3	Inductively coupled plasmas	105
3.2	Complex Plasmas with Positive Grains	107
3.2.1	UV-induced plasmas	108
3.2.2	Thermal plasmas	110
3.2.3	Nuclear-induced complex plasmas	113
3.3	Traditional Diagnostic Techniques in Complex Plasmas	114
3.3.1	Probe measurements	115
3.3.2	Spectroscopic techniques	119
3.4	Detection and Diagnostics of Dust Particles	123
3.4.1	Detection in laboratory and processing plasmas	124
3.4.2	Dust structure diagnostics	126
3.4.3	Methods of measuring charges on grain particles	130
3.5	Dust Grains as a Diagnostic Tool	133
3.5.1	Plasma sheath diagnostics	134
3.5.2	Spatial profiles of main plasma parameters	138

4. Particle Dynamics in a Complex Plasma	141
4.1 Dynamic Phenomena	141
4.1.1 Modeling dust particle dynamics in a plasma sheath	142
4.1.2 Dynamics of particles in chemically active plasmas .	150
4.1.2.1 Dynamics of fine particles in silane plasmas	151
4.1.2.2 Levitation in fluorocarbon plasmas	152
4.1.3 Oscillations of a particle in a plasma sheath	158
4.1.4 Diffusion of dust particles	162
4.2 Arrangements and Instability of Confined Dust	
Particles	169
4.2.1 Modeling stability of dust particles confinement . . .	170
4.2.2 Experiments on particle arrangements and stability .	178
4.2.3 Self-excitation of vertical motions of dust particles .	185
5. Structures and Phase Transitions in Complex Plasmas	191
5.1 Self-Organized Plasma-Particle States	192
5.1.1 Dust-plasma sheath as a self-organized structure . .	192
5.1.2 Dust voids: observations and main mechanisms . . .	199
5.1.3 Modeling of dust voids	202
5.1.3.1 Collisionless dust voids	202
5.1.3.2 Voids in collision-dominated plasmas	207
5.2 Liquid and Crystal-Like Structures	213
5.2.1 Structures in capacitively coupled RF discharge . . .	214
5.2.2 ICP and DC discharge structures	219
5.2.3 Ordered structures in thermal plasmas	223
5.2.4 Dust structures in nuclear and UV induced complex	
plasmas	227
5.3 Phase States and Phase Transitions	233
5.3.1 Order controlling parameters in a complex plasma .	233
5.3.2 Criteria of phase transitions	237
5.3.3 Experimental observations of phase transitions . . .	241
6. Waves and Instabilities in Complex Plasmas	245
6.1 Waves in Arrays of Colloid Particles	247
6.1.1 Dust-lattice waves	247
6.1.2 Experiments on dust-lattice waves	251
6.1.3 Dust-lattice transverse waves with out-of plane	
motions	256

6.1.3.1	Oscillation modes in one-dimensional chains of particles	257
6.1.3.2	Oscillation modes in two vertically arranged one-dimensional chains	259
6.1.4	Dust-lattice waves in the arrays of rod-like particles .	264
6.1.5	Waves in chains of magnetized particles	269
6.1.5.1	Compressional and bending modes	272
6.1.5.2	Angular magnetic lattice modes	275
6.2	Waves in Weakly Coupled Unmagnetized Complex Plasmas	276
6.2.1	Langmuir waves	276
6.2.2	Ion-acoustic waves	280
6.2.3	Dust-acoustic waves	283
6.2.4	Surface waves	287
6.2.4.1	Ion-acoustic surface waves at the dielectric-complex plasma interface	287
6.2.4.2	Electrostatic surface waves at the dusty plasma-metal interface	289
6.2.4.3	Electromagnetic surface waves in a dust-contaminated large-area plasma source . . .	291
6.3	Waves in Weakly Coupled Magnetized Complex Plasmas	294
6.3.1	The Alfvén resonance	296
6.3.2	Waves in a weakly non-uniform plasma	297
6.3.3	Surface waves	300
6.3.3.1	Dispersion	300
6.3.3.2	Damping	302
6.4	Instabilities in Weakly Coupled Plasmas	304
6.4.1	Dust ion-acoustic instability	304
6.4.2	Dust-acoustic instability	308
6.4.3	Buneman “dust-ion streaming” instability	313
6.4.4	Parametric and modulational instabilities in magnetized complex plasmas	316
6.4.4.1	Parametric pumping	317
6.4.4.2	Modulational instabilities	318
6.4.5	Other instabilities	320

7. Fine Particles in Industrial Applications	323
7.1 Growth and Characterization of Nano- and Micron-Sized Particles	324
7.1.1 Origin and mechanisms of growth of clusters and particulates in reactive plasmas	325
7.1.1.1 Silane plasmas	325
7.1.1.2 Hydrocarbon plasmas	330
7.1.1.3 Fluorocarbon plasmas	337
7.1.2 Effects of fine particles on discharge stability	340
7.1.3 Particle growth in plasma-enhanced sputtering facilities	345
7.1.4 Problems of particle detection in the nanometer range	348
7.2 Deleterious Aspects	354
7.2.1 Particulate powders as process contaminants in microelectronics	354
7.2.2 Removal and growth suppression of dust particles	356
7.2.3 Role of dust particles in fusion reactors	360
7.3 New Applications of Nano- and Micron-Sized Particles	363
7.3.1 Nanoparticles in the plasma-assisted assembly of carbon-based nanostructures	363
7.3.2 Nanopowders in plasma-enhanced chemical vapor deposition of nanostructured silicon-based films	369
7.3.3 High-rate cluster and particulate deposition on nanostructured surfaces: a new paradigm in thin film fabrication	375
7.3.4 Particle size as a key factor in nano-scale technologies	381
7.3.5 Other industrial applications of nano- and micron-sized particles	386
7.3.6 Concluding remarks	394
<i>Conclusions</i>	399
<i>Bibliography</i>	403
<i>Index</i>	435
