Preface	vii
1. Introduction	1
1.1 Preliminary Remarks . . . . .	1
1.2 Structure of the Book . . . . .	2
2. Controller Architecture	5
2.1 Introduction . . . . .	5
2.2 PI Controller Structures . . . . .	6
2.3 PID Controller Structures . . . . .	7
2.3.1 Ideal PID controller structure and its variations . . . . .	7
2.3.2 Classical PID controller structure and its variations . . . . .	11
2.3.3 Non-interacting PID controller structure and its variations . . . . .	12
2.3.4 Other PID controller structures . . . . .	17
2.3.5 Comments on the PID controller structures . . . . .	19
2.4 Process Modelling . . . . .	20
2.5 Organisation of the Tuning Rules . . . . .	24
3. Tuning Rules for PI Controllers	26
3.1 FOLPD Model . . . . .	26
3.1.1 Ideal controller – Table 3 . . . . .	26
3.1.2 Ideal controller in series with a first order lag – Table 4 . . . . .	61
3.1.3 Ideal controller in series with a second order filter – Table 5 . . . . .	62
3.1.4 Controller with set-point weighting – Table 6 . . . . .	63
3.1.5 Controller with proportional term acting on the output 1 – Table 7 . . . . .	65
3.1.6 Controller with proportional term acting on the output 2 – Table 8 . . . . .	66

3.2	FOLPD Model with a Positive Zero	67
3.2.1	Ideal controller – Table 9	67
3.2.2	Ideal controller in series with a first order lag – Table 10	68
3.3	FOLPD Model with a Negative Zero	69
3.3.1	Ideal controller in series with a first order lag – Table 11	69
3.4	Non-Model Specific	70
3.4.1	Ideal controller – Table 12	70
3.4.2	Controller with set-point weighting – Table 13	75
3.5	IPD Model	76
3.5.1	Ideal controller – Table 14	76
3.5.2	Ideal controller in series with a first order lag – Table 15	83
3.5.3	Controller with set-point weighting – Table 16	84
3.5.4	Controller with proportional term acting on the output 1 – Table 17	85
3.5.5	Controller with proportional term acting on the output 2 – Table 18	87
3.5.6	Controller with a double integral term – Table 19	88
3.6	FOLIPD Model	89
3.6.1	Ideal controller – Table 20	89
3.6.2	Controller with set-point weighting – Table 21	92
3.6.3	Controller with proportional term acting on the output 1 – Table 22	94
3.6.4	Controller with proportional term acting on the output 2 – Table 23	101
3.7	SOSPD Model	102
3.7.1	Ideal controller – Table 24	102
3.7.2	Controller with set-point weighting – Table 25	120
3.8	SOSIPD Model – Repeated Pole	122
3.8.1	Controller with set-point weighting – Table 26	122
3.9	SOSPD Model with a Positive Zero	123
3.9.1	Ideal controller – Table 27	123
3.10	SOSPD Model (repeated pole) with a Negative Zero	125
3.10.1	Ideal controller in series with a first order lag – Table 28	125
3.11	Third Order System plus Time Delay Model	126
3.11.1	Ideal controller – Table 29	126
3.11.2	Controller with set-point weighting – Table 30	128
3.12	Unstable FOLPD Model	130
3.12.1	Ideal controller – Table 31	130

3.12.2 Controller with set-point weighting – Table 32 . . . . .	135
3.12.3 Controller with proportional term acting on the output 1 – Table 33 . . . . .	137
3.12.4 Controller with proportional term acting on the output 2 – Table 34 . . . . .	140
3.13 Unstable FOLPD Model with a Positive Zero . . . . .	141
3.13.1 Ideal controller – Table 35 . . . . .	141
3.13.2 Ideal controller in series with a first order lag – Table 36 . . . . .	142
3.13.3 Controller with set-point weighting – Table 37 . . . . .	143
3.14 Unstable SOSPD Model (one unstable pole) . . . . .	145
3.14.1 Ideal controller – Table 38 . . . . .	145
3.15 Unstable SOSPD Model with a Positive Zero . . . . .	147
3.15.1 Ideal controller – Table 39 . . . . .	147
3.15.2 Controller with set-point weighting – Table 40 . . . . .	148
3.16 Delay Model . . . . .	149
3.16.1 Ideal controller – Table 41 . . . . .	149
3.17 General Model with a Repeated Pole . . . . .	152
3.17.1 Ideal controller – Table 42 . . . . .	152
3.18 General Model with Integrator . . . . .	153
3.18.1 Ideal controller – Table 43 . . . . .	153
4. Tuning Rules for PID Controllers . . . . .	154
4.1 FOLPD Model . . . . .	154
4.1.1 Ideal controller – Table 44 . . . . .	154
4.1.2 Ideal controller in series with a first order lag – Table 45 . . . . .	181
4.1.3 Ideal controller in series with a second order filter – Table 46 . . . . .	183
4.1.4 Ideal controller with weighted proportional term – Table 47 . . . . .	185
4.1.5 Ideal controller with first order filter and set-point weighting 1 – Table 48 . . . . .	186
4.1.6 Controller with filtered derivative – Table 49 . . . . .	187
4.1.7 Blending controller – Table 50 . . . . .	193
4.1.8 Classical controller 1 – Table 51 . . . . .	194
4.1.9 Classical controller 2 – Table 52 . . . . .	208
4.1.10 Series controller (classical controller 3) – Table 53 . . . . .	209
4.1.11 Classical controller 4 – Table 54 . . . . .	211
4.1.12 Non-interacting controller 1 – Table 55 . . . . .	212
4.1.13 Non-interacting controller 2a – Table 56 . . . . .	213
4.1.14 Non-interacting controller 2b – Table 57 . . . . .	215

4.1.15 Non-interacting controller based on the two degree of freedom structure 1 – Table 58 . . . . .	217
4.1.16 Non-interacting controller based on the two degree of freedom structure 2 – Table 59 . . . . .	222
4.1.17 Non-interacting controller based on the two degree of freedom structure 3 – Table 60 . . . . .	223
4.1.18 Non-interacting controller 4 – Table 61 . . . . .	224
4.1.19 Non-interacting controller 5 – Table 62 . . . . .	226
4.1.20 Non-interacting controller 6 (I-PD controller) – Table 63 . . . . .	227
4.1.21 Non-interacting controller 7 – Table 64 . . . . .	230
4.1.22 Non-interacting controller 11 – Table 65 . . . . .	231
4.1.23 Non-interacting controller 12 – Table 66 . . . . .	232
4.1.24 Industrial controller – Table 67 . . . . .	233
4.2 Non-Model Specific . . . . .	235
4.2.1 Ideal controller – Table 68 . . . . .	235
4.2.2 Ideal controller in series with a first order lag – Table 69 . . . . .	241
4.2.3 Ideal controller in series with a second order filter – Table 70 . . . . .	243
4.2.4 Ideal controller with weighted proportional term – Table 71 . . . . .	245
4.2.5 Controller with filtered derivative – Table 72 . . . . .	246
4.2.6 Ideal controller with set-point weighting 1 – Table 73 . . . . .	252
4.2.7 Classical controller 1 – Table 74 . . . . .	253
4.2.8 Series controller (classical controller 3) – Table 75 . . . . .	254
4.2.9 Classical controller 4 – Table 76 . . . . .	255
4.2.10 Non-interacting controller based on the two degree of freedom structure 1 – Table 77 . . . . .	256
4.2.11 Non-interacting controller 4 – Table 78 . . . . .	257
4.2.12 Non-interacting controller 9 – Table 79 . . . . .	258
4.3 IPD Model . . . . .	259
4.3.1 Ideal controller – Table 80 . . . . .	259
4.3.2 Ideal controller in series with a first order lag – Table 81 . . . . .	262
4.3.3 Ideal controller with first order filter and set-point weighting 2 – Table 82 . . . . .	263
4.3.4 Controller with filtered derivative – Table 83 . . . . .	264
4.3.5 Controller with filtered derivative and dynamics on the controlled variable – Table 84 . . . . .	265
4.3.6 Classical controller 1 – Table 85 . . . . .	266
4.3.7 Classical controller 2 – Table 86 . . . . .	268

4.3.8	Classical controller 4 – Table 87 . . . . .	269
4.3.9	Non-interacting controller based on the two degree of freedom structure 1 – Table 88 . . . . .	270
4.3.10	Non-interacting controller based on the two degree of freedom structure 3 – Table 89 . . . . .	272
4.3.11	Non-interacting controller 4 – Table 90 . . . . .	273
4.3.12	Non-interacting controller 6 (I-PD controller) – Table 91 . . . . .	274
4.3.13	Non-interacting controller 8 – Table 92 . . . . .	276
4.3.14	Non-interacting controller 10 – Table 93 . . . . .	277
4.3.15	Non-interacting controller 12 – Table 94 . . . . .	278
4.4	FOLIPD Model . . . . .	279
4.4.1	Ideal controller – Table 95 . . . . .	279
4.4.2	Ideal controller in series with a first order lag – Table 96 . . . . .	282
4.4.3	Ideal controller with weighted proportional term – Table 97 . . . . .	284
4.4.4	Controller with filtered derivative – Table 98 . . . . .	285
4.4.5	Controller with filtered derivative with set-point weighting 1 – Table 99 . . . . .	286
4.4.6	Controller with filtered derivative with set-point weighting 3 – Table 100 . . . . .	287
4.4.7	Ideal controller with set-point weighting 1 – Table 101 . . . . .	289
4.4.8	Classical controller 1 – Table 102 . . . . .	290
4.4.9	Classical controller 2 – Table 103 . . . . .	292
4.4.10	Series controller (classical controller 3) – Table 104 . . . . .	293
4.4.11	Classical controller 4 – Table 105 . . . . .	294
4.4.12	Non-interacting controller based on the two degree of freedom structure 1 – Table 106 . . . . .	295
4.4.13	Non-interacting controller 4 – Table 107 . . . . .	297
4.4.14	Non-interacting controller 6 (I-PD controller) – Table 108 . . . . .	298
4.4.15	Non-interacting controller 8 – Table 109 . . . . .	303
4.4.16	Non-interacting controller 11 – Table 110 . . . . .	304
4.4.17	Non-interacting controller 12 – Table 111 . . . . .	305
4.4.18	Industrial controller – Table 112 . . . . .	306
4.4.19	Alternative controller 1 – Table 113 . . . . .	307
4.4.20	Alternative controller 2 – Table 114 . . . . .	308
4.5	SOSPD Model . . . . .	309
4.5.1	Ideal controller – Table 115 . . . . .	309
4.5.2	Ideal controller in series with a first order lag – Table 116 . . . . .	332

4.5.3	Ideal controller in series with a first order filter – Table 117 . . . . .	336
4.5.4	Ideal controller in series with a second order filter – Table 118 . . . . .	337
4.5.5	Controller with filtered derivative – Table 119 . . . . .	338
4.5.6	Controller with filtered derivative in series with a second order filter – Table 120 . . . . .	339
4.5.7	Ideal controller with set-point weighting 1 – Table 121 . . .	340
4.5.8	Ideal controller with set-point weighting 2 – Table 122 . . .	341
4.5.9	Classical controller 1 – Table 123 . . . . .	342
4.5.10	Classical controller 2 – Table 124 . . . . .	351
4.5.11	Series controller (classical controller 3) – Table 125 . . . . .	352
4.5.12	Non-interacting controller 1 – Table 126 . . . . .	354
4.5.13	Non-interacting controller based on the two degree of freedom structure 1 – Table 127 . . . . .	363
4.5.14	Non-interacting controller 4 – Table 128 . . . . .	368
4.5.15	Non-interacting controller 5 – Table 129 . . . . .	370
4.5.16	Non-interacting controller 6 – Table 130 . . . . .	371
4.5.17	Alternative controller 4 – Table 131 . . . . .	372
4.6	I <sup>2</sup> PD Model . . . . .	374
4.6.1	Controller with filtered derivative with set-point weighting 2 – Table 132 . . . . .	374
4.6.2	Controller with filtered derivative with set-point weighting 4 – Table 133 . . . . .	376
4.6.3	Series controller (classical controller 3) – Table 134 . . . . .	378
4.6.4	Non-interacting controller based on the two degree of freedom structure 1 – Table 135 . . . . .	379
4.6.5	Industrial controller – Table 136 . . . . .	380
4.7	SOSIPD Model (repeated pole) . . . . .	381
4.7.1	Non-interacting controller based on the two degree of freedom structure 1 – Table 137 . . . . .	381
4.8	SOSPD Model with a Positive Zero . . . . .	383
4.8.1	Ideal controller – Table 138 . . . . .	383
4.8.2	Ideal controller in series with a first order lag – Table 139 . . . . .	385
4.8.3	Controller with filtered derivative – Table 140 . . . . .	386
4.8.4	Classical controller 1 – Table 141 . . . . .	387
4.8.5	Series controller (classical controller 3) – Table 142 . . . . .	388
4.8.6	Classical controller 4 – Table 143 . . . . .	389
4.8.7	Non-interacting controller 1 – Table 144 . . . . .	390
4.8.8	Non-interacting controller based on the two degree of freedom structure 1 – Table 145 . . . . .	391

4.9	SOSPD Model with a Negative Zero . . . . .	392
4.9.1	Ideal controller – Table 146 . . . . .	392
4.9.2	Controller with filtered derivative – Table 147 . . . . .	393
4.9.3	Classical controller 1 – Table 148 . . . . .	394
4.9.4	Classical controller 4 – Table 149 . . . . .	395
4.9.5	Non-interacting controller 1 – Table 150 . . . . .	396
4.9.6	Non-interacting controller based on the two degree of freedom structure 1 – Table 151 . . . . .	397
4.10	Third Order System plus Time Delay Model . . . . .	398
4.10.1	Ideal controller – Table 152 . . . . .	398
4.10.2	Ideal controller in series with a first order lag – Table 153 . . . . .	399
4.10.3	Controller with filtered derivative – Table 154 . . . . .	400
4.10.4	Non-interacting controller based on the two degree of freedom structure 1 – Table 155 . . . . .	401
4.11	Unstable FOLPD Model . . . . .	403
4.11.1	Ideal controller – Table 156 . . . . .	403
4.11.2	Ideal controller in series with a first order lag – Table 157 . . . . .	408
4.11.3	Ideal controller with set-point weighting 1 – Table 158 . . . . .	410
4.11.4	Classical controller 1 – Table 159 . . . . .	414
4.11.5	Series controller (classical controller 3) – Table 160 . . . . .	415
4.11.6	Non-interacting controller based on the two degree of freedom structure 1 – Table 161 . . . . .	416
4.11.7	Non-interacting controller 3 – Table 162 . . . . .	420
4.11.8	Non-interacting controller 8 – Table 163 . . . . .	421
4.11.9	Non-interacting controller 10 – Table 164 . . . . .	423
4.11.10	Non-interacting controller 12 – Table 165 . . . . .	425
4.12	Unstable SOSPD Model (one unstable pole) . . . . .	427
4.12.1	Ideal controller – Table 166 . . . . .	427
4.12.2	Ideal controller in series with a first order lag – Table 167 . . . . .	430
4.12.3	Ideal controller with set-point weighting 1 – Table 168 . . . . .	431
4.12.4	Classical controller 1 – Table 169 . . . . .	432
4.12.5	Series controller (classical controller 3) – Table 170 . . . . .	433
4.12.6	Non-interacting controller 3 – Table 171 . . . . .	434
4.12.7	Non-interacting controller 8 – Table 172 . . . . .	439
4.13	Unstable SOSPD Model (two unstable poles) . . . . .	442
4.13.1	Ideal controller – Table 173 . . . . .	442
4.13.2	Ideal controller with set-point weighting 1 – Table 174 . . . . .	444
4.14	Unstable SOSPD Model with a Positive Zero . . . . .	445

4.14.1 Ideal controller in series with a first order lag – Table 175 . . . . .	445
4.14.2 Non-interacting controller based on the two degree of freedom structure 1 – Table 176 . . . . .	447
4.15 Delay Model . . . . .	449
4.15.1 Ideal controller – Table 177 . . . . .	449
4.15.2 Ideal controller in series with a first order lag – Table 178 . . . . .	450
4.15.3 Classical controller 1 – Table 179 . . . . .	451
4.16 General Model with a Repeated Pole . . . . .	452
4.16.1 Ideal controller – Table 180 . . . . .	452
4.16.2 Ideal controller in series with a first order lag – Table 181 . . . . .	453
4.17 General Stable Non-Oscillating Model with a Time Delay . . . . .	454
4.17.1 Ideal controller – Table 182 . . . . .	454
4.18 Fifth Order System plus Delay Model . . . . .	455
4.18.1 Ideal controller – Table 183 . . . . .	455
4.18.2 Controller with filtered derivative – Table 184 . . . . .	457
4.18.3 Non-interacting controller 7 – Table 185 . . . . .	460
5. Performance and Robustness Issues in the Compensation of FOLPD Processes with PI and PID Controllers . . . . .	462
5.1 Introduction . . . . .	462
5.2 The Analytical Determination of Gain and Phase Margin . . . . .	463
5.2.1 PI tuning formulae . . . . .	463
5.2.2 PID tuning formulae . . . . .	466
5.3 The Analytical Determination of Maximum Sensitivity . . . . .	469
5.4 Simulation Results . . . . .	470
5.5 Design of Tuning Rules to Achieve Constant Gain and Phase Margins, for all Values of Delay . . . . .	475
5.5.1 PI controller design . . . . .	475
5.5.1.1 Processes modelled in FOLPD form . . . . .	475
5.5.1.2 Processes modelled in IPD form . . . . .	477
5.5.2 PID controller design . . . . .	480
5.5.2.1 Processes modelled in FOLPD form – classical controller 1 . . . . .	480
5.5.2.2 Processes modelled in SOSPD form – series controller . . . . .	482
5.5.2.3 Processes modelled in SOSPD form with a negative zero – classical controller 1 . . . . .	482
5.5.3 PD controller design . . . . .	483
5.6 Conclusions . . . . .	484
