

CONTENTS

Preface		xi
Chapter 1	Hydride vapor phase epitaxy of group III nitride materials	
	<i>V. Dmitriev, A. Usikov</i>	1-40
	1. Introduction	1
	2. Experiment	4
	3. Material Properties	5
	3.1. Undoped GaN layers	6
	3.2. Si-doped GaN layers	10
	3.3. Mg-doped GaN layers	11
	3.4. Zn-doped GaN layers	13
	3.5. AlN layers	14
	3.6. AlGaN layers	16
	3.7. InN and InGaN layers	19
	4. New directions in HVPE development	21
	4.1. Large area and multi wafer HVPE growth	21
	4.2. Multi-layer structures	23
	4.3. P-n junctions	24
	4.4. Structures with two dimensional carrier gas	26
	4.5. Nano structures and porous materials	26
	5. Applications of HVPE grown group III nitride materials	27
	5.1. Substrate applications	27
	5.1.1. Template substrates	27
	5.1.2. Free-standing substrates	28
	5.1.3. Bulk substrates	29
	5.2. Device Applications	31
	6. Conclusions	33
Chapter 2	Planar MOVPE technology for epitaxy of III-nitride materials	
	<i>M. Dauelsberg, B. Schineller, J. Kaeppler</i>	41-71
	1. History of Reactor Development for III-Nitrides	41
	2. Types of Planar Reactors	43
	3. Reactor Modeling	45
	3.1. Growth Kinetics of Group-III Nitride MOVPE	46
	3.2. Modeling of MOVPE processes	48
	3.3. Horizontal Tube Reactors: Flow Dynamics and Reactor Technology	50

3.4. Planetary Reactors:	
Transport Phenomena & Parameter Dependencies	53
4. In-situ Technology in Nitride MOCVD Systems	57
5. The Mass Production of GaN and Related Materials	62
5.1. Optoelectronic Device Structures	62
5.2. Growth in the 8x4 inch Configuration	63
5.3. Special Aspects of Growth on 4 inch	63
5.4. The Growth of InGaN Structures	67
5.5. The Growth of AlGaN Structures	68
5.6. High Growth Rates in Mass Production Reactors	69
Chapter 3	Close-Coupled Showerhead MOCVD technology for the epitaxy of GaN and related materials
	<i>E. J. Thrush, A. R. Boyd</i> 73-116
1.	Introduction 74
2.	Reactor Development 75
2.1.	Close-Coupled Showerhead Technology 76
2.2.	Modeling 80
2.3.	Scale-up of CCS Reactors 85
3.	In-situ Optical Monitoring 86
3.1.	Optical Pyrometry 86
3.2.	Laser Interferometry (Reflectometry) 88
3.3.	Emissivity Corrected Pyrometry 91
3.4.	Spectral Reflectometry 93
4.	Reagent Concentration Monitoring 94
5.	Growth Results 97
5.1.	GaN Template Growth in Close-Coupled Showerhead Reactors 97
5.2.	Quantum Wells in Close-Coupled Showerhead Reactors 97
5.3.	HEMT Structures in Close-Coupled Showerhead Reactors 102
6.	Mass Production of GaN Based Devices 107
6.1.	Cost of Ownership Dependence on System Size 107
6.2.	Process Cycles 109
6.3.	Growth Data from 19x2" Production System 111
7.	Acknowledgements 114
Chapter 4	Molecular beam epitaxy for III-N materials
	<i>H. Tang, J. Webb</i> 117-160
1.	Introduction 117
2.	MBE technology 118
2.1.	Ammonia vs Plasma Assisted MBE 121

3.	Semi-insulating GaN	123
3.1.	Growth of semi-insulating GaN	123
3.2.	Carbon doping	124
3.3.	Other dopants for semi-insulating GaN	129
4.	Electrical Characteristics	130
4.1.	Polarization Induced Two Dimensional Electron Gas	130
4.2.	Reproducibility and Uniformity	132
4.3.	Low Temperature Mobility	135
4.4.	Magnetotransport Properties	138
5.	AlGa _N /GaN HFET Device Characteristics	144
5.1.	DC and Small-Signal RF Characteristics	145
5.1.1.	Devices Grown on Sapphire and SiC by Ammonia MBE	145
5.1.2.	Devices Grown on Resistive Silicon by Ammonia MBE	147
5.1.3.	Devices Grown on Sapphire and SiC by PAMBE	149
5.2.	Large-Signal RF Performance	150
5.3.	Device Scalability and Large Periphery Performance	154
6.	Conclusion	156
Chapter 5	Growth and properties of nonpolar GaN films and heterostructures	
	<i>Y. J. Sun, O. Brandt</i>	161-202
1.	Introduction	161
2.	Substrate: γ -LiAlO ₂	163
2.1.	Properties of the substrate	163
2.2.	Polarity of the substrate	166
2.3.	In-plane orientation relationship	168
3.	Optimization of Heteroepitaxy of GaN Films On γ -LiAlO ₂ (100)	168
3.1.	Impact of nucleation conditions on phase purity	169
3.2.	Influence of nucleation temperature on surface quality	172
4.	Ga Adsorption and Desorption Kinetics	174
4.1.	Surface reconstruction	174
4.2.	Ga adsorption/desorption kinetics	177
5.	M-plane (In,Ga)N/GaN Multiple Quantum Wells	185
5.1.	In incorporation and surface segregation	186
5.2.	Recombination mechanism	190
6.	Conclusion and Outlook	196

Chapter 6	Indium-nitride growth by high-pressure CVD: real-time and ex-situ characterization	
	<i>N. Dietz</i>	203-235
	1. Introduction	204
	2. HPCVD Reactor Characteristics	206
	3. Reactor flow characterization	209
	4. Precursor characterization: Ammonia and Trimethylindium	211
	4.1. Optical characterization of Trimethylindium, TMI, [In(CH ₃) ₃]	212
	4.2. Optical characterization of ammonia (NH ₃)	214
	5. Flow kinetics: Analysis utilizing pulsed gas injection	216
	5.1. Flow characterization during pulsed precursor injection	218
	6. Precursor decomposition dynamics at higher pressures	220
	7. Growth of InN: Real-time optical monitoring	222
	8. Ex-situ characterization of InN layers	227
	9. Summary and Outlook	232
Chapter 7	A new look on InN	
	<i>L.-W. Tu, C.-L. Hsiao, M.-H. Tsai</i>	237-256
	1. Introduction	237
	2. Growth and Structures	239
	3. Compositions and Electrical Properties	245
	4. Optical Characterizations	247
	5. Four Possibilities	249
	6. Conclusions and Outlook	250
Chapter 8	Growth and optical/electrical properties of Al _x Ga _{1-x} N alloys in the full composition range	
	<i>F. Yun</i>	257-304
	1. Introduction	257
	2. Material Growth of AlGa _N	260
	2.1. Growth Techniques and Full Range Control of Al	260
	2.2. Conduction type control of AlGa _N	271
	2.3. Dislocation and Morphology Analysis	272
	2.4. Chemical Ordering in AlGa _N	280
	3. Electrical Properties	282
	3.1. Electrical Transport	282
	3.2. Deep Level Defects	286
	4. Optical Properties	289
	5. Band Gap Bowing of AlGa _N	295
	6. Summary	299

Chapter 9	Optical investigation of InGaN/GaN quantum well structures grown by MOCVD	
	<i>Tao Wang</i>	305-343
	1. Introduction	305
	2. Strain-relaxation in InGaN/GaN MQW	307
	3. Quantum-confined Stark effect and exciton-localization Effect	313
	4. Optical Investigation of InGaN/GaN MQWS under high excitation	320
	5. Study of stimulated emission from InGaN/GaN multiple quantum well structures	326
	6. Femtosecond studies of electron capture times in InGaN/GaN MQWs	331
	7. Summary	337
Chapter 10	Clustering nanostructures and optical characteristics in InGaN/GaN quantum-well structures with silicon doping	
	<i>Y.-C. Cheng, C.-Y. Chen, C. C. Yang</i>	345-368
	1. Introduction	346
	2. Sample Preparation and Measurement Conditions	348
	3. Photoluminescence and Photoluminescence Excitation	349
	3.1. Amplified Spontaneous Emission	353
	3.2. Cathodoluminescence	356
	3.3. Strain State Analysis	360
	4. Discussions	361
	5. Conclusions	366
Chapter 11	III-nitrides micro- and nano-structures	
	<i>H. M. Ng, A. Chowdhury</i>	369-398
	1. Introduction and Overview	369
	2. Nanostructures by Epitaxy	370
	3. Nanostructures by Selective Etching and Regrowth	375
	3.1. Photoelectrochemical Etching	376
	3.2. Polarity Selective Chemical Etching (PSCE)	377
	3.3. 1D and 2D Periodic Structures Formed by PSCE	383
	4. Applications of GaN Micro- and Nanostructures	387
	4.1. Second Harmonic Generation	387
	4.2. Electron Field Emission	389
	5. Summary and Future Outlook	393

Chapter 12	New developments in dilute nitride semiconductor research	
	<i>W. Shan, W. Walukiewicz, K. M. Yu, J.W. Ager III, E.E. Haller</i>	399-428
1.	Introduction	399
2.	Material Properties	400
3.	Device Applications	404
3.1.	Long-wavelength Laser Diodes for Telecommunications	404
3.2.	Solar Cells for Photovoltaic Solar Power Conversion	406
4.	Origin of Band-gap Reduction in Dilute Nitrides	408
4.1.	Large Band-gap Bowing and Early Impurity Models	408
4.2.	Band Anticrossing	409
4.3.	E _c and E _v transitions	413
4.4.	Enhancement in Maximum Free Electron Concentration	416
5.	Concluding Remarks: From Dilute III-N-V Nitrides to Dilute II-O-VI Oxides	422
