<i>Preface</i>	vii
1. Complex Numbers	1
1.1 Informal Introduction	1
1.2 Complex Plane	2
1.3 Properties of the Modulus	4
1.4 The Argument of a Complex Number	8
1.5 Formal Construction of Complex Numbers	12
1.6 The Riemann Sphere and the Extended Complex Plane	14
2. Sequences and Series	17
2.1 Complex Sequences	17
2.2 Subsequences	17
2.3 Convergence of Sequences	18
2.4 Cauchy Sequences	21
2.5 Complex Series	23
2.6 Absolute Convergence	24
2.7 n^{th} -Root Test	25
2.8 Ratio Test	26
3. Metric Space Properties of the Complex Plane	29
3.1 Open Discs and Interior Points	29
3.2 Closed Sets	32
3.3 Limit Points	34
3.4 Closure of a Set	36
3.5 Boundary of a Set	38

3.6	Cantor's Theorem	40
3.7	Compact Sets	41
3.8	Polygons and Paths in \mathbb{C}	49
3.9	Connectedness	51
3.10	Domains	56
4.	Analytic Functions	59
4.1	Complex-Valued Functions	59
4.2	Continuous Functions	59
4.3	Complex Differentiable Functions	61
4.4	Cauchy-Riemann Equations	66
4.5	Analytic Functions	70
4.6	Power Series	73
4.7	The Derived Series	74
4.8	Identity Theorem for Power Series	77
5.	The Complex Exponential and Trigonometric Functions	79
5.1	The Functions $\exp z$, $\sin z$ and $\cos z$	79
5.2	Complex Hyperbolic Functions	80
5.3	Properties of $\exp z$	80
5.4	Properties of $\sin z$ and $\cos z$	83
5.5	Addition Formulae	84
5.6	The Appearance of π	86
5.7	Inverse Trigonometric Functions	89
5.8	More on $\exp z$ and the Zeros of $\sin z$ and $\cos z$	91
5.9	The Argument Revisited	92
5.10	$\text{Arg } z$ is Continuous in the Cut-Plane	94
6.	The Complex Logarithm	97
6.1	Introduction	97
6.2	The Complex Logarithm and its Properties	98
6.3	Complex Powers	100
6.4	Branches of the Logarithm	103
7.	Complex Integration	111
7.1	Paths and Contours	111
7.2	The Length of a Contour	113
7.3	Integration along a Contour	115

7.4	Basic Estimate	120
7.5	Fundamental Theorem of Calculus	121
7.6	Primitives	123
8.	Cauchy's Theorem	127
8.1	Cauchy's Theorem for a Triangle	127
8.2	Cauchy's Theorem for Star-Domains	133
8.3	Deformation Lemma	136
8.4	Cauchy's Integral Formula	138
8.5	Taylor Series Expansion	139
8.6	Cauchy's Integral Formulae for Derivatives	142
8.7	Morera's Theorem	145
8.8	Cauchy's Inequality and Liouville's Theorem	146
8.9	Identity Theorem	149
8.10	Preservation of Angles	154
9.	The Laurent Expansion	157
9.1	Laurent Expansion	157
9.2	Uniqueness of the Laurent Expansion	163
10.	Singularities and Meromorphic Functions	167
10.1	Isolated Singularities	167
10.2	Behaviour near an Isolated Singularity	169
10.3	Behaviour as $ z \rightarrow \infty$	172
10.4	Casorati-Weierstrass Theorem	174
11.	Theory of Residues	175
11.1	Residues	175
11.2	Winding Number (Index)	177
11.3	Cauchy's Residue Theorem	179
12.	The Argument Principle	185
12.1	Zeros and Poles	185
12.2	Argument Principle	187
12.3	Rouché's Theorem	189
12.4	Open Mapping Theorem	193
13.	Maximum Modulus Principle	195

13.1 Mean Value Property	195
13.2 Maximum Modulus Principle	196
13.3 Minimum Modulus Principle	200
13.4 Functions on the Unit Disc	201
13.5 Hadamard's Theorem and the Three Lines Lemma	204
14. Möbius Transformations	207
14.1 Special Transformations	207
14.2 Inversion	209
14.3 Möbius Transformations	210
14.4 Möbius Transformations in the Extended Complex Plane	215
15. Harmonic Functions	219
15.1 Harmonic Functions	219
15.2 Local Existence of a Harmonic Conjugate	220
15.3 Maximum and Minimum Principle	221
16. Local Properties of Analytic Functions	223
16.1 Local Uniform Convergence	223
16.2 Hurwitz's Theorem	226
16.3 Vitali's Theorem	229
Appendix A Some Results from Real Analysis	231
A.1 Completeness of \mathbb{R}	231
A.2 Bolzano-Weierstrass Theorem	233
A.3 Comparison Test for Convergence of Series	235
A.4 Dirichlet's Test	235
A.5 Alternating Series Test	236
A.6 Continuous Functions on $[a, b]$ Attain their Bounds	236
A.7 Intermediate Value Theorem	238
A.8 Rolle's Theorem	238
A.9 Mean Value Theorem	239
<i>Bibliography</i>	241
<i>Index</i>	243
