Contributors	v
Preface	xi
1 Neurogenetics — Single Gene Disorders	1
Genetic Linkage Analysis	3
Linkage Disequilibrium and Association	3
Mutational Spectrum	5
Molecular Genetic Tools	6
Molecular Genetic Testing	9
Animal Models	11
Web-based Information for Genetic Diagnosis and Testing	13
Outlook	15
Acknowledgements	16
References	16
2 Neurogenetics II: Complex Disorders	19
Guiding Principles	21
Applications to Clinical Neurology	27
Tauopathies	31
New Technologies	35
Conclusions	38
Appendix A	38
Human Genetic Variation	38
Appendix B	39
Genetic Linkage and Association Analyses	39
References	40

3	Functional Genomics and Proteomics: Application in Neurosciences	45
	Functional Genomics	46
	RNA Preparation	47
	Differential Display	48
	SAGE	49
	Microarrays	49
	Real Time Q-PCR	53
	Proteomics	55
	Two Dimensional Gel Electrophoresis	56
	ICAT — Isotope Coded Affinity Tags	59
	Protein Microarrays	61
	Mass Spectrometry	64
	SELDI	67
	Future Prospects	68
	Acknowledgements	69
	References	69
4	Mitochondria	77
	Historical Introduction	77
	What are Mitochondria and What Do They Do?	79
	The Genetic Basis of Mitochondrial Biogenesis	81
	Mitochondrial Disease: Genotype and Phenotype	83
	Mitochondrial Genetic Factors	89
	Confirming Suspected Mitochondrial Disease	94
	Managing Mitochondrial Disease — The Future	
	Animal Models	100
	Conclusion	101
	Acknowledgements	105
	References	105
5	Nanotechnology for Neuronal Ion Channels	113
	Channels — Essential for Neuronal Excitability	114
	History of the Voltage Clamp Technique	114
	Application to Clinical Neurology	120

Principles Behind the Techniques	127
Potential Application of the Technologies in the Future	132
Conclusions	137
Acknowledgements	137
Appendix 1	137
Glossary of Terms	137
Appendix 2	139
Associated Websites of Interest	139
References	140
6 Molecular and Cellular Pathways of Neurodegeneration in Motor Neurone Disease	143
What Do We Know about the Causes of Motor Neurone Degeneration?	145
Genetics of ALS/MND	146
Oxidative Stress	156
Excitotoxicity	157
Mitochondrial Dysfunction	158
Cytoskeletal Elements and Axonal Transport	160
Protein Aggregation	161
Inflammatory Cascades and the Role of Non-Neuronal Cells	162
Apoptosis	164
Cell Specific Features of Motor Neurones Which may Predispose to Neurodegeneration	165
Conclusions	166
Acknowledgements	167
References	167
7 Neurodegenerative Disorders: Parkinson’s Disease and Huntington’s Disease	181
Parkinson’s Disease	181
Huntington’s Disease	190
Conclusions	194
References	195

8	Molecular Pathogenesis of Neuroinflammation	201
	A Brief History of Immune Privilege	201
	Experimental Autoimmune Encephalomyelitis — An Animal Model to Study Interactions of the Immune System with the CNS	202
	How Modern Techniques Contributed to our Understanding of Neuroinflammation in EAE and Multiple Sclerosis	204
	Microdissection and Molecular Analyses of Single Cells Involved in the Disease Process	210
	Novel Techniques and their Contribution to Clinical Neurology — A Future Perspective	211
	Conclusion	215
	Acknowledgements	215
	References	215
9	Neurovirology	221
	Introduction	221
	Specific Techniques And Their Applications	223
	Acknowledgements	236
	References	236
10	Molecular Neurology of Prion Disease	241
	Introduction to Prions and Historical Perspective	241
	Molecular Biology of Prions	244
	Application to Clinical Neurology	255
	References	274
11	Monitoring and Interpretation of Intracranial Pressure	285
	Methods of Measurement	287
	Typical Events and Trends in ICP Monitoring	288
	Waveform Analysis of ICP	292
	Pressure–Volume Compensatory Reserve	293
	Cerebrovascular Pressure Reactivity	294
	Other Methods of ICP Analysis	296
	Practical Use of the ICP Derived Parameters: “Optimal CPP” and Multiple Trend Analysis	298

Association with Outcome Following Severe Head Injury	299
ICP in Hydrocephalus and Benign Intracranial Hypertension	300
Attempts to Measure ICP and CPP Non-Invasively	305
Is ICP Monitoring Useful	306
Acknowledgements	308
References	308
12 Cerebral Perfusion and Stroke	315
Cerebrovascular Anatomy	316
Methods for Measurement of Cerebral Blood Flow	316
Regulation of the Normal Cerebral Circulation	319
Cerebral Circulation Responses to Focal Ischaemia	326
The Ischaemic Penumbra	327
Mechanisms of Infarction in Penumbra Tissue	333
Summary	335
References	336
13 A Review of Structural Magnetic Resonance Neuroimaging	343
Definition(s) of Structural MRI	344
Applications of Structural MRI	344
The Next Ten Years	363
Conclusion	366
Acknowledgements	366
References	367
14 Applications of Positron Emission Tomography (PET) in Neurology	377
Principles of PET	378
Application of PET to Clinical Neurology	381
Potential Future Applications	393
References	393

15 Functional Magnetic Resonance Imaging	401
Principles of Functional MRI	402
Clinical Applications of fMRI	409
fMRI as a Marker of Pathological State	414
Linking fMRI to other MRI Techniques for Characterising Pathology and other Directions for the Future	415
Acknowledgements	418
References	418
16 How to Spot Bias and Other Potential Problems in Randomised Controlled Trials	423
Bias	426
Precision	431
Analysis and Inferences	434
The Future	440
Conclusions	440
Acknowledgements	441
References	441
Index	445
