Preface	vii
1. Introduction	1
1.1 Trends in Image Coding Algorithm	1
1.1.1 DCT-based block coding	1
1.1.2 DWT-based bit-plane coding	2
1.2 Trends in Video Coding Algorithm	4
1.2.1 Close-loop motion-compensated prediction	4
1.2.2 Open-loop motion-compensated temporal filtering	5
1.3 VLSI Design Consideration of Multimedia Systems	7
1.3.1 System design consideration	7
1.3.1.1 Computation analysis	7
1.3.1.2 Data access analysis	8
1.3.2 Module design consideration	10
1.4 Book Outline	10
2. Algorithm Views of Discrete Wavelet Transform	13
2.1 Basic Theoretical View of Discrete Wavelet Transform	13
2.1.1 Properties of a multi-resolution transform	13
2.1.2 The pyramid structure of discrete multi-resolution representation	15
2.1.3 The wavelet decomposition	17
2.1.4 The pyramid structure of computing wavelet transform	20
2.1.5 Inverse wavelet transform	22
2.1.6 2-D wavelet transform	25

2.2	Polyphase decomposition	27
2.3	Lifting Scheme	31
2.3.1	Lifting steps for wavelet transform	32
2.3.2	The Euclidean algorithm	34
2.3.3	The lifting factorization algorithm	36
2.4	B-spline formulation	42
2.5	Classification of 1-D DWT Algorithms	44
2.6	Algorithms of 2-D DWT	45
2.7	Image Coding Using 2-D DWT	48
3.	Architectures of One-Dimensional DWT	53
3.1	Convolution-Based Architectures	53
3.2	Lifting-Based Architectures	54
3.2.1	Direct implementation of lifting scheme	55
3.2.2	Flipping structure	59
3.2.3	Design example of JPEG 2000 default (9,7) filter	61
3.2.4	Design example of integer (9,7) filter	64
3.2.5	Design example of linear (6,10) filter	66
3.3	B-Spline-Based Architectures	67
3.3.1	B-spline factorized architectures for DWT and IDWT	67
3.3.2	Implementation methods of B-spline part	71
3.3.2.1	Direct implementation of B-spline part	71
3.3.2.2	Pascal implementation of B-spline part	72
3.3.3	Design example of JPEG 2000 default (9,7) DWT filter	72
3.3.4	DWT with linear (6,10) filter	75
3.3.4.1	Comparison	75
3.3.4.2	Detailed gate count comparison	78
3.3.5	Design example of linear (10,18) DWT filter	79
3.3.6	Design example of linear (10,18) IDWT filter	81
3.4	General Performance Analysis	82
3.4.1	Multipliers and adders	85
3.4.2	Critical path and registers	86
3.4.3	Summary	87
3.5	Wordlength Analysis in Single-Level 1-D DWT	87
3.5.1	Dynamic range analysis for single-level 1-D DWT	89
3.5.1.1	Dynamic range analysis for the output of cascaded FIR filters	90

3.5.1.2	Dynamic range analysis for single level 1-D DWT	90
3.5.2	Round-off noise analysis basics for single level 1-D DWT	91
4.	Architectures of Two-Dimensional DWT	95
4.1	Introduction	95
4.2	Frame Memory Scan Methods	96
4.2.1	Direct scan	96
4.2.2	Row-column-column-row scan	97
4.2.3	Line-based scan	98
4.2.3.1	Data flow for data buffer of size $1.5N$	101
4.2.4	Complete data flow for data buffer of size $(1 + (1/2)^k)N$	103
4.2.4.1	1-level line-based architecture	103
4.2.4.2	Multi-level line-based architecture	106
4.2.5	Non-overlapped and overlapped block-based scans	107
4.2.6	Non-overlapped and overlapped stripe-based scans	109
4.2.7	Comparison of scan methods for 1-level 2-D DWT architectures	109
4.2.8	Summary	110
4.3	Line-Based Architecture	112
4.3.1	Systolic-parallel and parallel-parallel architectures	112
4.3.2	Wu's architecture	113
4.3.3	Generic 1-level line-based architecture	113
4.3.4	Generic multi-level line-based architecture	115
4.3.4.1	Adopting two 1-D DWT modules (2DWTM)	116
4.3.4.2	Adopting three 1-D DWT modules (3DWTM)	117
4.3.5	Comparison	119
4.3.5.1	General case	119
4.3.5.2	JPEG 2000 default (9,7) filter	120
4.4	Line Buffer Wordlength Analysis for Line-Based 2-D DWT	120
4.4.1	Background to wordlength analysis in line-based DWT	122
4.4.2	The dynamic range analysis methodology	124
4.4.2.1	Dynamic range analysis of FIR filters	124
4.4.2.2	LL-band dynamic range analysis	124

4.4.2.3	Single level dynamic range analysis	126
4.4.2.4	The combined dynamic range analysis methodology	126
4.4.3	The round-off error analysis methodology	128
4.4.3.1	Model of round-off operations	128
4.4.3.2	Noise power model of single-level 1-D DWT	128
4.4.3.3	Noise power model of multi-level 2-D DWT	129
4.4.3.4	Noise power analysis in reconstructed image	129
4.4.3.5	Summary of round-off-error analysis	130
4.4.4	Experimental results	130
4.4.5	Summary of wordlength analysis	132
4.5	On-Chip Memory Implementation Issues	132
4.5.1	Overview	133
4.5.2	Schemes to reduce memory bandwidth	133
4.5.2.1	Reducing average memory bandwidth using parallel processing	134
4.5.2.2	Two-lifting scheme	135
4.5.2.3	N-lifting scheme	136
4.5.3	The M-scan for multiple-lifting scheme	138
4.5.3.1	M-scan for two-lifting scheme	138
4.5.3.2	M-scan for N-lifting scheme	139
4.5.4	Experimental results	141
4.5.5	Summary	142
5.	Practical Design Examples of 2-D DWT: JPEG 2000 Encoder Systems	143
5.1	Introduction to JPEG 2000 Algorithm	143
5.1.1	Coding system overview	144
5.1.2	Discrete wavelet transform	145
5.1.2.1	5-3 reversible filter	146
5.1.2.2	9-7 irreversible filter	146
5.1.3	Embedded block coding	147
5.1.4	Rate-distortion optimization	149
5.1.5	Coding efficiency of JPEG 2000	151
5.2	Design Issues of JPEG 2000 Encoding Systems	155
5.2.1	Discrete wavelet transform	156

5.2.2	Embedded block coding	157
5.2.3	Rate-distortion optimization	157
5.3	Tile Pipelined Scheme and the Corresponding DWT	
	Architecture	158
5.3.1	Preliminary	158
5.3.2	System architecture	159
5.3.3	Discrete wavelet transform	160
5.3.4	Embedded block coding	161
5.3.5	Scheduling	162
5.3.6	Experimental results	164
	5.3.6.1 Performance and chip feature	164
	5.3.6.2 Comparisons	166
5.3.7	Summary	166
5.4	Stripe Pipelined Scheme and the Corresponding DWT	
	Architecture	167
5.4.1	Preliminary	168
5.4.2	System architecture	169
	5.4.2.1 Stripe pipeline scheme	170
	5.4.2.2 Level switch DWT	171
	5.4.2.3 Memory requirement for LS-DWT	174
	5.4.2.4 Code-block switch EBC	175
5.4.3	Experimental results	176
	5.4.3.1 Memory reduction	176
	5.4.3.2 Comparison	177
5.4.4	Summary	178
5.5	Summary	178
6.	Introduction to MCTF	181
6.1	Convolution-Based MCTF	181
6.2	Lifting-Based MCTF	183
6.3	5/3 MCTF and 1/3 MCTF	185
	6.3.1 Prediction stage	185
	6.3.2 Update stage	187
	6.3.3 Multi-level MCTF	188
6.4	Different MCTF Schemes with DWT for Video Coding	188
	6.4.1 Multi-level MCTF scheme	189
	6.4.2 In-band MCTF scheme	192
	6.4.3 Hybrid MCTF scheme	193
6.5	Pyramid MCTF with DCT for Video Coding	194

6.6	Scalable Video Coding	197
7.	Introduction to Motion Estimation	201
7.1	The Concept of Motion Estimation and Compensation	201
7.2	Block Matching Algorithm	202
7.2.1	Full search algorithm	204
7.2.2	Fast full search algorithm	205
7.2.2.1	Partial distortion elimination	205
7.2.2.2	Successive elimination algorithm	206
7.2.3	Fast search algorithm	207
7.2.3.1	Simplification of matching criterion	207
7.2.3.2	Reduction on search candidates	208
7.2.3.3	Predictive search	211
7.2.3.4	Hierarchical search	212
7.2.4	Summary	213
7.3	Architecture of Motion Estimation	214
7.3.1	Architecture for full search algorithm	215
7.3.1.1	Inter-level architecture	215
7.3.1.2	Intra-level architecture	218
7.3.1.3	Summary	220
7.3.2	Architecture for fast full search and fast search algorithms	220
7.3.2.1	Tree-based architecture	221
7.3.2.2	Architecture for diamond search	224
7.3.2.3	Architecture for three step search	224
7.3.2.4	Summary	225
7.3.3	Block-level data re-use scheme	225
7.3.3.1	Redundancy access factor	226
7.3.3.2	Level A scheme	227
7.3.3.3	Level B scheme	227
7.3.3.4	Level C scheme	228
7.3.3.5	Level D scheme	229
7.3.3.6	Level C+ scheme	229
7.3.3.7	Comparison	232
7.4	Summary	232
8.	Analysis and Architecture of MCTF	235
8.1	Memory Access in MCTF	235

8.1.1	Redundancy access factor for ME	236
8.1.2	Redundancy access factor for MC	237
8.2	One-Level Motion Compensated Temporal Filtering	239
8.2.1	The architecture for MCTF	239
8.2.2	Memory analysis for prediction stage	240
8.2.2.1	Direct implementation	240
8.2.2.2	Double Reference Frames (DRF)	241
8.2.2.3	Double Current Frames (DCF)	242
8.2.2.4	Modified Double Current Frames (m-DCF)	243
8.2.2.5	Comparison	244
8.2.2.6	Extension	246
8.2.3	Memory analysis for update stage	249
8.2.4	Memory analysis of one-level MCTF	250
8.3	Multi-Level Motion-Compensated Temporal Filtering	252
8.3.1	The preconditions of multi-level MCTF	252
8.3.1.1	Decomposition level	252
8.3.1.2	Inter-coding for L-frames	254
8.3.1.3	Update stage	254
8.3.2	Analysis of multi-level MCTF	256
8.3.2.1	Computational complexity	256
8.3.2.2	External memory access	257
8.3.2.3	External memory size	257
8.3.2.4	Coding delay	258
8.4	Case Study	261
8.5	Rate-Distortion-Computation Scalability	262
8.6	Analysis of Pyramid MCTF	264
8.6.1	Computation complexity	265
8.6.2	Memory bandwidth	266
8.6.3	External memory storage	266
8.6.4	Summary	267
8.7	Conclusion	267
Bibliography		269
