

Contents

Preface	xi
1. Introduction: Nanobiotechnology and Bionanotechnology	1
1.1 Classical Biotechnology: Industrial Production Using Biological Systems	2
1.2 Modern Biotechnology: From Industrial Processes to Novel Therapeutics	3
1.3 Modern Biotechnology: Immunological, Enzymatic, and Nucleic Acids-Based Technology.....	5
1.4 The Interface Between Nanotechnological and Biotechnology: Bionanotechnology	7
1.5 Supramolecular (Bio)Chemistry: The Theoretical Basis for Self-Assembly	9
1.6 The Next Steps for Self-Association at the Nano-Scale	10
1.7 Biology in Nanotechnology and Nano-Sciences in Biotechnology	11
1.8 The Combination of Bionanotechnology and Nanobiotechnology	13
1.9 Nanobionics and Bio-Inspired Nanotechnology	14
2. A Brief Introduction to Nanotechnology	17
2.1 The Emergence of Nanotechnology: “There’s Plenty of Room at the Bottom”.....	17
2.2 Coining the Term “Nanotechnology” and Emergence of the Nanotechnology Concept.....	19
2.3 Manipulating Molecules: The Scanning Probe Microscopes.....	20
2.4 Carbon Fullerene: A New Form of Carbon	23
2.5 Carbon Nanotubes: Key Building Blocks for Future Nanotechnological Applications	26
2.6 Non-Carbon Nanotubes and Fullerene-Like Material: The Inorganic Nanomaterials	28
2.7 Quantum Dots and Other Nano-Particles.....	30

2.8	Nanowires, Nanorods, and Other Nanomaterials.....	31
2.9	Magnetic Nanoparticles	31
3.	Natural Biological Assembly at the Nano-Scale	33
3.1	The Process of Self-Assembly and Self-Organization in Biology .	33
3.2	Organization of Bacterial S-Layers	35
3.3	Self-Organization of Viruses	37
3.4	Self-Organization of Phospholipids Membranes	40
3.5	Fibrillar Cytoskeleton Assemblies.....	42
3.6	Nucleic Acids: The Genetic Information Media and a Template for Nanotechnological Applications	45
3.7	Oligosaccharides and Polysaccharides: Another Class of Biological Polymers.....	46
3.8	Amyloid Fibrils as Self-Assembled Nano-Scale Bio-Assemblies .	47
3.9	Silk: Natural Fibrillar Supramolecular Protein Assembly	48
3.10	Ribosome: The Protein Assembly Line Instrument	49
3.11	Other Complex Machines in the Genetic Code Expression.....	50
3.12	Protein Quality-Control Machinery: The Proteasome	50
3.13	Biological Nano-Motors: Kinesin and Dynein	51
3.14	Other Nano-Motors: Flagella and Cilia	51
3.15	Ion Channels: Nano-Pores of High Specificity.....	52
4.	Nanometric Biological Assemblies: Molecular and Chemical Basis for Interaction	55
4.1	Emergence of Biological Activity Through Self-Assembly	55
4.2	Molecular Recognition and Chemical Affinity.....	56
4.3	Affinity and Specificity of Biological Interactions.....	58
4.4	The Relation Between Thermodynamics and Kinetics of Dissociation.....	59
4.5	The Chemical Basis for Molecular Recognition and Specific Binding	60
4.6	The Formation Specific Complexes by an Increase in Entropy.....	62
5.	Molecular Recognition and the Formation of Biological Structures	65
5.1	Antibodies as the Molecular Sensors of Recognition	65
5.2	Selection of Antibodies and Equivalent Systems in the Test Tube	67
5.3	Recognition Between Nucleic Acids by Proteins	69
5.4	Interaction Between Receptors and Ligands.....	70
5.5	Molecular Recognition Between Nucleic Acids	71

6. Self-Assembly of Biological and Bio-Inspired Nano-Materials	73
6.1 Formation of DNA-Based Materials.....	73
6.2 Peptide-Based Nanomaterials.....	76
6.3 The First Peptide Nanotubes.....	77
6.4 Amphiphile and Surfactant-Like Peptide Building-Blocks.....	79
6.5 Charge Complementary as a Driven Force for Self-Assembly.....	81
6.6 Conjugation of Peptides for Self-Assembly.....	81
6.7 Aromatic Interactions for the Formation of Nanostructures.....	83
6.8 The Formation of Aromatic Dipeptide Nanotubes (ADNT).....	84
6.9 The Formation of Spherical Nanostructures by Short Peptides.....	87
6.10 Peptide Nucleic Acid (PNA).....	87
7. Application of Biological Assemblies in Nanotechnology	89
7.1 The Use of S-Layer for Nanolithography.....	89
7.2 The Use of DNA for Fabrication of Conductive Nanowires.....	91
7.3 Amyloid Fibrils as Templates for Nanowires Fabrication.....	94
7.4 Metallization of Actin Filaments by Chemical Modification.....	95
7.5 The Use of Aromatic Peptide Nanotubes.....	97
7.6 Bacteriophages as Novel Biomaterials.....	98
7.7 The Use of Peptide Template for Biomineralization.....	98
7.8 Production of Inorganic Composite Nanomaterial.....	99
7.9 The Utilization of Biomineralization in Nanotechnology.....	100
8. Medical and Other Applications of Bionanotechnology	103
8.1 The Use of Drug Nanocrystals for Improved Application.....	103
8.2 The Use of Nano-Containers for Drug Delivery.....	104
8.3 The Use of Inorganic Nanowires for Biological Detection.....	106
8.4 The Use of Soft Lithography for Biotechnology.....	108
8.5 Contrast Agents by Nanomagnetic Materials.....	109
8.6 Nanoagriculture.....	110
8.7 Water Technology and Nanotechnology.....	111
8.8 Nanocosmetics.....	112
8.9 Solar Energy Applications.....	113
9. Future Prospects for Nanobiotechnology and Bionanotechnology	115
9.1 The Marriage of Molecular Biology and Nanotechnology.....	115
9.2 The Engineering of Modified Biological Systems for the Assembly of Nanostructures.....	116
9.3 Nanotechnology and Tissue Engineering.....	117

9.4	Engineering of the Brain Tissue	119
9.5	Making Artificial Biological Inorganic Composites.....	120
9.6	Nanobio Machines and Nanorobots.....	121

10. Concluding Remarks: The Prospects and Dangers of the Nanobiological Revolution **123**

Appendix A	There’s Plenty of Room at the Bottom: An Invitation to Enter a New Field of Physics – by Richard P. Feynman	129
-------------------	---	-----

Appendix B	List of Bionanotechnological and Nanobiotechnological Companies	147
-------------------	---	-----

Appendix C	Glossary	161
-------------------	----------	-----

Bibliography		171
---------------------	--	------------

Index		181
