Preface	xi
1. Introduction	1
1.1 Some Historical Notes	4
1.2 Overview of Protein Structural Elements and Basic Definitions.....	12
1.2.1 The amino acids	12
1.2.2 The polypeptide chain	17
1.3 Non-covalent Interactions and Structure-Function Relationships in Proteins.....	19
1.3.1 Some comments on Anfinsen's dogma.....	20
1.3.2 Experimental measurements of non-covalent interactions in proteins.....	21
References	22
2. Van der Waals Interactions.....	25
2.1 Observation of van der Waals Interactions.....	26
2.2 Nature of van der Waals Interactions	28
2.2.1 Dispersion forces.....	29
2.2.2 Dipole-dipole interactions	37
2.2.3 Dipole-induced dipole interactions	42
2.2.4 Repulsive interactions	44
2.3 Potential Functions for Application in Proteins.....	46
2.4 Approximation for Polyatomic Systems.....	48
References	50
3. Hydrogen Bonds	51
3.1 Nature of Hydrogen Bonds.....	51
3.1.1 Proton donors, electronegativity	52
3.1.2 Proton acceptors	55
3.2 Geometry and Strength of Hydrogen Bonds	56
3.2.1 Directionality	57
3.2.2 Hydrogen bond length.....	64
3.2.3 Hydrogen bond strength.....	67
3.2.4 Hydrogen bond potential functions	71

3.3	Hydrogen Bonds in Proteins.....	73
3.3.1	Secondary structure elements.....	73
3.3.2	Hydrogen bonds involving side chains	76
3.3.3	Salt bridges.....	78
3.3.4	Hydrogen bond networks	80
3.4	Hydrogen Bonds and Protein Stability	83
3.4.1	Hydrogen bonds within the polypeptide chain, role in folding.....	84
3.4.2	Hydrogen bonds involving side chain, role in stability.....	86
	References	89
4.	Hydrophobic Interactions.....	91
4.1	Nature of Hydrophobic Interactions, Pseudo Forces	91
4.2	Water	93
4.2.1	Flickering clusters model of water	93
4.2.2	Hydrocarbons in water, iceberg model.....	96
4.3	Hydrophobic Effect	98
4.3.1	Oil drop in water	98
4.3.2	Experimental assessment of hydrophobic interaction	100
4.4	Hydrophobic Interactions in Proteins	102
4.4.1	Additivity of hydrophobic interactions	104
4.4.2	Solvent accessibility.....	105
4.4.3	Evaluation of hydrophobic interactions	111
4.4.4	Size of the hydrophobic core.....	116
4.4.5	Hydrophobic packing and packing defects	121
	References	127
5.	Electrostatic Interactions.....	129
5.1	Debye-Hückel Theory	130
5.1.1	Poisson-Boltzmann equation.....	130
5.1.2	Parameter of Debye.....	135
5.1.3	The electrostatic potential of an ion in solution	137
5.1.4	Extension for proteins	139
5.2	Ion-Solvent Interactions	140
5.2.1	Born model.....	140
5.2.2	Application of the Born model for proteins: why do charges tend to be on protein surface?	144
5.2.3	Generalised Born theory for proteins	146
5.3	Calculation of Electrostatic Interactions in Proteins.....	151
5.3.1	The protein molecule as a dielectric material.....	151
5.3.2	Dielectric model for calculation of electrostatic interactions in proteins.....	157
5.3.3	Numerical solution of the Poisson-Boltzmann equation, finite difference method	159

5.3.4	Boundary conditions	168
5.3.5	Electrostatic potential calculated by means of the finite difference method	171
	References	175
6.	Ionisation Equilibria in Proteins	177
6.1	Why Does One Need to Know Ionisation Equilibria?.....	179
6.2	Basic Definitions	180
6.2.1	Protonation/deprotonation equilibria.....	180
6.2.2	Henderson-Hasselbalch equation	182
6.2.3	Degree of deprotonation and degree of protonation.....	184
6.2.4	Ionisation equilibrium constants of model compounds	186
6.3	Factors Determining Ionisation Equilibria in Proteins	189
6.3.1	Desolvation	191
6.3.1.1	Born energy	191
6.3.1.2	Calculation of the Born energy	194
6.3.2	Interactions with the protein permanent charges.....	197
6.3.3	Definition of intrinsic pK	198
6.3.4	Charge-charge interactions.....	199
6.4	Combinatorial Problem	201
6.4.1	Solution based on the Boltzmann weighted sum.....	202
6.4.2	Solution based on the Monte Carlo simulation	206
6.5	Cooperative Ionisation.....	209
	References	215
7.	Conformational Flexibility.....	217
7.1	Allocation Variation of Polar Hydrogen Atoms	217
7.1.1	Titrateable and pH-sensitive sites	218
7.1.2	Microscopic pK	219
7.1.3	Population of the microscopic states	224
7.2	Examples for pH-Dependent Hydrogen Bonding.....	229
7.2.1	Ionisation properties of Asp76 in ribonuclease T ₁	229
7.2.2	Hydrogen bond rearrangement related to protein function ...	234
7.3	Conformational Flexibility Involving Non-hydrogen Atoms	239
7.3.1	Conformations generated by means of molecular dynamics simulation.....	241
7.3.2	Average pK values	246
7.3.3	Desolvation and charge-dipole energy compensation	249
7.3.4	Dynamics of salt bridges	252
	References	254
8.	Electrostatic Interactions and Stability of Proteins	255
8.1	Definitions	255
8.2	Unfolding Induced by pH.....	257
8.3	Modelling of Unfolded Proteins	262

8.3.1	Spherical model of unfolded proteins	264
8.3.2	Size of the dielectric sphere	265
8.3.3	Average distance between charges.....	270
8.3.4	Ionisation equilibria in unfolded proteins	273
8.4	Thermal Stability of Proteins.....	277
	References	281
Appendix A	Basic Definitions of Thermodynamics and Statistical Thermodynamics.....	283
Appendix B	Electric Dipoles.....	311
Appendix C	Solution of Laplace and Poisson-Boltzmann Equation	319
Index.....		329
