Preface	v
1. Groups	1
1.1 Definition of a group and examples	1
1.2 Homomorphisms, subgroups and quotient groups	3
1.3 Constructions	6
1.4 Topological groups	8
1.5 Lie groups	10
1.6 Haar measure	21
2. Group Actions and Representations	23
2.1 Introduction	23
2.2 Groups and G -spaces	23
2.3 Orbit spaces and actions	25
2.4 Twisted products	30
2.5 Isotropy type and stratification by isotropy type	33
2.6 Representations	36
2.7 Irreducible representations and the isotypic decomposition	40
2.8 Orbit structure for representations	47
2.9 Slices	49
2.10 Invariant and equivariant maps	51
3. Smooth G -manifolds	57
3.1 Proper G -manifolds	57
3.2 G -vector bundles	63
3.3 Infinitesimal theory	65

3.4	Riemannian manifolds	66
3.5	The differentiable slice theorem	71
3.6	Equivariant isotopy extension theorem	73
3.7	Orbit structure for G -manifolds	74
3.8	The stratification of M by normal isotropy type	78
3.9	Stratified sets	80
3.10	Invariant Riemannian metrics on a compact Lie group	84
4.	Equivariant Bifurcation Theory: Steady State Bifurcation	89
4.1	Introduction and preliminaries	89
4.2	Solution branches and the branching pattern	91
4.3	Symmetry breaking — the MISC	95
4.4	Determinacy	97
4.5	The hyperoctahedral family	100
4.6	Phase vector field and maps of hyperbolic type	111
4.7	Transforming to generalized spherical polar coordinates	117
4.8	$d(V, G)$ -determinacy, $d(V, G) = 2, 3$	120
4.9	Counting branches and finding their location	124
4.10	The symmetric and alternating groups	125
4.11	The groups $S_{k+1} \times \mathbb{Z}_2$ and $A_{k+1} \times \mathbb{Z}_2$	130
4.12	Appendix: Proof of theorem on hyperbolic elements	134
4.13	Notes on Chapter 4	136
5.	Equivariant Bifurcation Theory: Dynamics	137
5.1	The invariant sphere theorem	137
5.2	The examples of dos Reis and Guckenheimer & Holmes	144
5.3	Steady state bifurcation to limit cycles	150
5.4	Bifurcation to complex dynamics in dimension four	162
5.5	The converse to the MISC	175
5.6	Hopf bifurcation and the invariant sphere theorem	178
5.7	Notes on Chapter 5	199
6.	Equivariant Transversality	201
6.1	Introduction	201
6.2	C^∞ -topologies on function spaces	202
6.3	Transversality	206
6.4	Stratumwise transversality and stability	208
6.5	Reduction to a problem about solving equations	210

6.6	Invariants and equivariants	212
6.7	The universal variety	219
6.8	Stratifications and semialgebraic sets	223
6.9	Canonical stratification of the universal variety Σ	225
6.10	Stratifying Σ_τ and \mathbb{U}	229
6.11	Equivariant coordinate changes on $V \times \mathbb{R}^s$ and W	233
6.12	Symmetries of the stratification \mathcal{A}	235
6.13	Openness of equivariant transversality	238
6.14	Global definitions and results	240
6.15	Solutions with specific isotropy type	242
6.16	Notes on Chapter 6	249
7.	Applications of G -transversality to Bifurcation Theory I	251
7.1	Weak stability and determinacy	251
7.2	Jet transversality	260
7.3	Equivariant jet transversality for families	267
7.4	Stability and determinacy	271
7.5	Higher order versions of G -transversality	277
7.6	Extensions to the case of non-finite G	279
7.7	Notes on Chapter 7	284
8.	Equivariant Dynamics	285
8.1	Invariant G -orbits	286
8.2	Stabilities and normal hyperbolicity	287
8.3	Relative fixed and periodic sets for diffeomorphisms	291
8.4	Genericity theorems for equivariant diffeomorphisms	304
8.5	Equivariant vector fields	308
8.6	Genericity theorems for equivariant vector fields	320
8.7	Notes on Chapter 8	322
9.	Dynamical Systems on G -manifolds	323
9.1	Skew products	323
9.2	Gradient dynamics	326
9.3	G -subshifts of finite type	333
9.4	Suspensions	343
9.5	The inverse limit: turning maps into homeomorphisms	347
9.6	Solenoidal attractors	351
9.7	Equivariant Anosov diffeomorphisms	379

9.8	Notes on Chapter 9	381
10.	Applications of G -transversality to Bifurcation Theory II	383
10.1	Technical preliminaries and basic notations	383
10.2	The universal variety for relative equilibria	392
10.3	Weak stability and determinacy	397
10.4	Weak stability and determinacy for reversible systems . .	400
10.5	Stability and determinacy	405
10.6	Bifurcation from relative equilibria	410
10.7	Stability and determinacy for maps	414
10.8	Strong determinacy	426
10.9	Normal form theorems	429
10.10	Relative periodic orbits	433
10.11	Notes for Chapter 10	456
	Bibliography	457
	Index of Notational Conventions	467
	Index	471
