

## Contents

<i>Preface</i>	v
1. Challenges in Modeling Liquid and Gas Flows in Micro/Nano Devices <i>M. Gad-el-Hak</i>	1
2. Using the Kinetic Equations for MEMS and NEMS <i>C. Cercignani, A. Frezzotti and S. Lorenzani</i>	37
3. Applying the Direct Simulation Monte Carlo (DSMC) Method to Gas-Filled MEMS Devices <i>M. A. Gallis</i>	81
4. New Approaches for the Simulation of Micro-Fluidics in MEMS <i>T. Y. Ng, H. Li, L. S. Pan, D. Xu and K. Y. Lam</i>	121
5. Evaluating Gas Damping in MEMS Using Fast Integral Equation Solvers <i>A. Frangi, W. Ye and J. White</i>	153
6. Experimental Techniques for Damping Characterization of Micro and Nanostructures <i>A. Bosseboeuf and H. Mathias</i>	183

7. Nonlinear Dynamics of Electrostatically Actuated MEMS	235
<i>S. K. De and N. R. Aluru</i>	
8. Coupled Deformation Analysis of Thin MEMS Plates	287
<i>S. Mukherjee and S. Telukunta</i>	
9. Pull-In Instability in Electrostatically Actuated MEMS due to Coulomb and Casimir Forces	329
<i>R. C. Batra, M. Porfiri and D. Spinello</i>	
10. Numerical Simulation of BioMEMS with Dielectrophoresis	375
<i>G. R. Liu and C. X. Song</i>	
11. Continuous Modeling of Multi-Physics Problems of Microsystems for Topology Optimization	399
<i>G. K. Ananthasuresh</i>	
12. Mechanical Characterization of Polysilicon at the Micro-Scale Through On-Chip Tests	427
<i>A. Corigliano, F. Cacchione, A. Frangi, S. Zerbini and M. Ferrera</i>	
13. Nano-Scale Testing of Nanowires and Carbon Nanotubes Using a Micro-Electro-Mechanical System	455
<i>H. D. Espinosa, Y. Zhu, B. Peng and O. Loh</i>
