<b>Preface</b>	<b>v</b>
<b>1 Introduction</b>	<b>1</b>
<b>2 Schrödinger Equation, its Separation and its Exact Eigenfunctions</b>	<b>15</b>
2.1 Separation of the time-independent Schrödinger equation for the internal motion	18
2.2 Properties of the eigenfunctions of the time-independent Schrödinger equation for the internal motion	22
<b>3 Development in Time of the Probability Amplitude for a Decaying State</b>	<b>27</b>
<b>4 Phase-Integral Method</b>	<b>30</b>
4.1 Phase-integral approximation generated from an unspecified base function	31
4.2 Connection formulas associated with a single transition point	38
4.2.1 Connection formulas pertaining to a first-order transition zero on the real axis	38
4.2.2 Connection formula pertaining to a first-order transition pole at the origin	40

4.3	Connection formula for a real, smooth, single-hump potential barrier	42
4.3.1	Wave function given as a standing wave	44
4.3.2	Supplementary quantity $\tilde{\phi}$	46
4.4	Quantization conditions for single-well potentials	49
<b>5</b>	<b>Derivation of Phase-Integral Formulas for Profiles, Energies and Half-Widths of Stark Levels</b>	<b>52</b>
5.1	Positions of the Stark levels	64
5.2	Formulas for the calculation of $dL/dE$ , $dK_{2n}/dE$ and $dK/dE$	66
5.3	Half-widths of the Stark levels	67
<b>6</b>	<b>Procedure for Transformation of the Phase-Integral Formulas into Formulas Involving Complete Elliptic Integrals</b>	<b>69</b>
	<b>Adjoined Papers by Anders Hökback and Per Olof Fröman</b>	<b>75</b>
<b>7</b>	<b>Phase-Integral Quantities and Their Partial Derivatives with Respect to <math>E</math> and <math>Z_1</math> Expressed in Terms of Complete Elliptic Integrals</b>	<b>77</b>
7.1	The $\xi$ -equation	78
7.2	The $\eta$ -equation in the sub-barrier case	82
7.3	The $\eta$ -equation in the super-barrier case	83
<b>8</b>	<b>Numerical Results</b>	<b>89</b>
	<b>References</b>	<b>145</b>
	<b>Name Index</b>	<b>149</b>
	<b>Subject Index</b>	<b>151</b>
