

CONTENTS

Preface	v
Notation	ix
1. Introduction to Tribology	1
1.1. Introduction	1
1.2. Regimes of Lubrication	4
1.3. Layout of the Book	6
References	7
2. The Nature of Rough Surfaces	9
2.1. Introduction	9
2.2. Surface Roughness	10
2.3. Measurement of Surface Texture	10
2.4. Types of Engineering Surface	12
2.5. Mathematical Representation of Surface Features	13
2.5.1. Analogue solutions	13
2.5.2. Discrete interval solutions of profile height	17
2.5.3. Statistical representation of surface texture	17
2.6. Worked Example	20
2.7. Closure	21
References	21
3. Elastic Solids in Normal Contact	23
3.1. Introduction	23
3.2. Deformation Characteristics	23
3.3. Surface Deformation in a Spherical Contact	29
3.4. Various Contact Geometries	32
3.4.1. Line or circular footprint contacts	32
3.4.2. Elliptical footprint contacts	33

3.4.3.	Worked Example (1)	33
3.5.	Onset of Yield	35
3.5.1.	Cylindrical surfaces	35
3.5.2.	Spherical surfaces	37
3.6.	Nominally Flat Rough Surfaces in Contact	38
3.6.1.	Idealized rough surfaces	38
3.6.2.	Contact between real rough surfaces	40
3.6.3.	Plasticity index	43
3.6.4.	Fully plastic surface contacts	44
3.6.5.	Worked Example (2)	46
3.7.	Contact Between Curved Rough Surfaces	46
3.8.	Hertzian Impact	47
3.9.	Closure	48
	Appendices	50
	References	50
4.	Dry Friction and Wear	51
4.1.	Introduction	51
4.2.	The Basic Mechanisms of Dry Friction	54
4.2.1.	Adhesion and deformation	54
4.2.2.	Adhesive friction	55
4.2.2.1.	Influence of contaminant films	59
4.2.3.	Deformation friction	60
4.2.3.1.	The ploughing component of deformation friction	61
4.2.4.	Elastic rolling friction	62
4.2.5.	Tractive rolling of an elastic cylinder	64
4.2.6.	Creep ratio	66
4.2.7.	Other examples of rolling motion	66
4.3.	Thermal Effects of a Frictional Temperature Rise in Concentrated Contacts	67
4.4.	Wear of Surfaces	68
4.4.1.	Adhesive wear	69
4.4.2.	Abrasive wear	71
4.4.3.	Macroscopic fatigue wear	72
4.4.4.	Microscopic sliding fatigue wear	73
4.4.5.	Corrosive wear	74
4.4.6.	Fretting corrosion	74

4.5.	Closure	75
	References	75
5.	Lubricant Properties	77
5.1.	Introduction	77
5.2.	Dynamic Viscosity	77
5.3.	Effect of Temperature on Viscosity	79
5.4.	The American Society for Testing Materials (A.S.T.M.) Chart	80
5.5.	Viscosity Index of Lubricants (VI)	80
5.6.	Polymer Thickened Oils	81
5.7.	Blends of Oils	82
5.8.	Grades of Oil	83
5.9.	Effect of Pressure on Viscosity	83
5.10.	Lubricant Density	85
5.11.	Effect of Shear Rate on Viscosity	86
5.12.	Worked Example	86
5.13.	Closure	88
	References	88
6.	The Reynolds and Energy Equations	89
6.1.	Introduction	89
6.2.	Reynolds Equation	89
6.3.	Reynolds Equation by Dimensional Analysis	91
6.4.	Derivation of Reynolds Equation in Three Dimensions	94
	6.4.1. Equilibrium of forces on a lubricant element .	95
	6.4.2. Velocity distribution	96
	6.4.3. Mass continuity	97
6.5.	Simplifications of Reynolds Equation	99
	6.5.1. Long bearing	100
	6.5.2. Long bearing approximation for rigid cylinders	101
	6.5.3. Line contact pressure distribution	101
	6.5.4. Line contact load	104
	6.5.5. Narrow bearings	105
	6.5.6. Squeeze film bearings	106
6.6.	Rolling Contacts	106
6.7.	The Energy Equation	107
	6.7.1. Significance of terms in the energy equation .	108
	6.7.2. Convected heat only	109

6.7.3.	Conducted heat only	109
6.7.4.	Heat flow ratio	110
6.8.	Closure	110
	References	111
7.	Thrust Bearings	113
7.1.	Introduction	113
7.2.	Analysis of Thrust Bearings	114
7.2.1.	Geometry	114
7.2.2.	Pressure distribution	114
7.2.3.	Load capacity	116
7.2.4.	Pivot point location	117
7.2.5.	Friction force	120
7.2.6.	Mass flow	121
7.2.7.	Temperature effect	122
7.2.8.	Effective temperature	124
7.3.	Finite Length Plane Thrust Bearings	125
7.3.1.	Introduction	125
7.3.2.	Thermal design of finite length bearings	125
7.3.3.	Power balance for the effective viscosity	126
7.3.4.	Effective temperature design coefficients	127
7.4.	Examples of Thermal Design	128
7.4.1.	Long bearing	128
7.4.2.	Finite length bearing	130
7.5.	Other Thrust Bearing Geometries	132
7.5.1.	The taper land bearing	133
7.5.2.	The Raleigh step bearing	133
7.5.3.	The pocket step bearing	135
7.6.	Closure	135
	Appendices	136
	References	136
8.	Journal Bearings	139
8.1.	Introduction	139
8.2.	Film Geometry	139
8.3.	The Pressure Equation for a Narrow Bearing	140
8.4.	Load	142
8.5.	Attitude Angle	144
8.6.	Lubricant Flow	145

8.6.1.	Side flow from hydrodynamic action	145
8.6.2.	Pressurized flow from a single supply hole . .	145
8.6.3.	Total pump delivery flow	146
8.6.4.	Double 180° journal bearings	147
8.6.5.	Circumferential groove bearings	148
8.7.	Friction in Journal Bearings	148
8.7.1.	Effect of the Reynolds boundary condition on friction	150
8.7.2.	Coefficient of friction	151
8.8.	Thermal Design of Journal Bearings	151
8.8.1.	Introduction	151
8.8.2.	Finding the effective viscosity	152
8.8.3.	Design example (Some of the data in this example is taken from Ref. 5)	154
8.9.	Mass Unbalance in Rotors	155
8.9.1.	Natural frequency of journal bearings	157
8.9.2.	Half speed cylindrical whirl of journal bearings	159
8.9.3.	Natural frequency of the complete rotor/ bearing system	161
8.10.	Journal Bearings with Periodic and Rotating Loads . .	161
8.11.	Closure	161
	Appendices	162
	References	164
9.	Externally Pressurized (EP) Bearings	165
9.1.	Introduction	165
9.2.	Some Applications of EP Bearings	166
9.3.	Principles of Hydrostatic Bearings	166
9.3.1.	Optimization	169
9.3.2.	Stiffness	169
9.3.3.	Compensators	171
9.3.4.	Worked Example 1	173
9.4.	Principles of Aerostatic Bearings	174
9.4.1.	Introduction	174
9.4.2.	Flow through the gas film	174
9.4.3.	Gas flow through the feed hole	176
9.4.4.	Matching the gas flows	177
9.4.5.	Aerostatic gas bearing load capacity	179
9.4.6.	Aerostatic bearing film stiffness	179

9.4.7.	Worked Example 2	181
9.4.8.	Aerostatic journal bearings	182
9.4.9.	Aerostatic journal bearing instability	183
9.5.	Closure	184
	References	184
10.	Elastohydrodynamic Lubrication (EHL)	185
10.1.	Introduction	185
10.2.	Principles of EHL	185
10.3.	Reynolds Equation Under Piezoviscous Conditions	188
10.4.	Discussion on EHL Line Contact Film Shape	192
10.5.	Circular Footprint EHL Contacts	192
10.6.	Numerical Predictions	192
10.7.	Computer Solution	195
10.8.	Experimental Methods	196
10.8.1.	Optical interferometry	196
10.9.	Results from Numerical Solutions	200
10.9.1.	Regimes of concentrated contact lubrication	200
10.9.2.	Concentrated contact numerical solution relationships	201
	Worked Example 10.1	203
10.10.	Friction Forces in EHL Contacts	205
10.10.1.	A viscoelastic model of the oil behavior	205
10.10.2.	Limiting shear stress	207
10.10.3.	Regimes of traction	209
10.10.4.	Determination of the friction coefficient	209
10.11.	Rough Surface EHL	213
10.12.	Closure	215
	References	215
11.	Fatigue Life of Rolling Element Bearings	217
11.1.	Introduction	217
11.2.	Failure Stress Hypotheses	219
11.2.1.	Asperity stress field	219
11.2.2.	Subsurface stress field	219
11.3.	Fatigue Life Dispersion	220
11.4.	Effect of Load on Fatigue Life	225
11.5.	Effect of EHL on Fatigue Life	225
11.6.	A Unified Life Model	226

11.7.	Closure	227
	References	227
12.	Transient Elastohydrodynamic Lubrication	229
12.1.	Introduction	229
12.2.	A Valve Train System	230
	12.2.1. An example	239
12.3.	EHL of Thin Shell Journal Bearings	243
12.4.	Transient EHL of Piston-to-Cylinder Liner	249
12.5.	Closure	262
	References	263
13.	Nano-Tribology	265
13.1.	Introduction	265
13.2.	Important Forces in Nano-Tribology	268
13.3.	Van der Waals Forces	269
	13.3.1. Concluding remarks on Van der Waals forces	270
13.4.	Electrostatic Forces	271
	13.4.1. An example	274
13.5.	Meniscus/Surface Tension Force	277
	13.5.1. An example	292
13.6.	Solvation Effect	293
	13.6.1. An example	297
13.7.	Mechanisms of Friction in Nano-Conjunctions	299
	13.7.1. An example	304
	References	307
14.	Bio-Tribology	309
14.1.	Introduction	309
14.2.	Tribology in the Animal World	310
	14.2.1. Allometry	310
	14.2.2. Forces and stresses	311
14.3.	Attachment and Locomotion of Small Animals on Smooth Surfaces	311
14.4.	Natural Human Synovial Joints	315
	14.4.1. Measurement of friction	316
	14.4.2. Lubrication of synovial joints	317
	14.4.3. Analysis of fluid-film lubrication in joints . .	317

14.4.4.	Evidence of boundary lubrication in synovial joints	320
14.4.5.	Overall view of human joint lubrication . . .	321
14.5.	Total Joint Replacements	321
14.5.1.	The hip	322
14.5.2.	Metal-on-metal total hip replacements	324
14.5.3.	Alternative material pairs	326
14.6.	Further Examples of Bio-Tribology	327
14.6.1.	Skin	327
14.6.2.	Hair	328
14.6.3.	Shaving	328
14.6.4.	Teeth	329
14.7.	Closure	329
	References	330
Questions		333
Book of Solutions		355
Index		387
