<i>Foreword</i>	vii
<i>Preface</i>	xiii
<i>Acknowledgments</i>	xvii
Part 1: Emergence and Complexity	1
1. A Quantum Origin of Life?	3
<i>Paul C. W. Davies</i>	
1.1. Chemistry and Information	5
1.2. Q-life	6
1.3. The Problem of Decoherence	9
1.4. Life as the “Solution” of a Quantum Search Algorithm . .	11
1.5. Quantum Choreography	13
References	16
2. Quantum Mechanics and Emergence	19
<i>Seth Lloyd</i>	
2.1. Bits	20
2.2. Coin Flips	20
2.3. The Computational Universe	22
2.4. Generating Complexity	25
2.5. A Human Perspective	28
2.6. A Quantum Perspective	29
References	29

Part 2: Quantum Mechanisms in Biology 31

3. Quantum Coherence and the Search for the First Replicator 33

Jim Al-Khalili and Johnjoe McFadden

3.1.	When did Life Start?	33
3.2.	Where did Life Start?	34
3.3.	Where did the Precursors Come From?	35
3.4.	What was the Nature of the First Self-replicator?	36
3.5.	The RNA World Hypothesis	37
3.6.	A Quantum Mechanical Origin of Life	39
3.6.1.	The dynamic combinatorial library	40
3.6.2.	The two-potential model	42
3.6.3.	Decoherence	44
3.6.4.	Replication as measurement	44
3.6.5.	Avoiding decoherence	45
3.7.	Summary	47
	References	47

4. Ultrafast Quantum Dynamics in Photosynthesis 51

*Alexandra Olaya Castro, Francesca Fassioli Olsen,
Chiu Fan Lee, and Neil F. Johnson*

4.1.	Introduction	51
4.2.	A Coherent Photosynthetic Unit (CPSU)	53
4.3.	Toy Model: Interacting Qubits with a Spin-star Configuration	58
4.4.	A More Detailed Model: Photosynthetic Unit of Purple Bacteria	63
4.5.	Experimental Considerations	65
4.6.	Outlook	66
	References	67

5. Modelling Quantum Decoherence in Biomolecules 71

Jacques Bothma, Joel Gilmore, and Ross H. McKenzie

5.1.	Introduction	71
5.2.	Time and Energy Scales	73
5.3.	Models for Quantum Baths and Decoherence	75
5.3.1.	The spin-boson model	76

5.3.2.	Caldeira-Leggett Hamiltonian	78
5.3.3.	The spectral density	79
5.4.	The Spectral Density for the Different Continuum Models of the Environment	80
5.5.	Obtaining the Spectral Density from Experimental Data	82
5.6.	Analytical Solution for the Time Evolution of the Density Matrix	86
5.7.	Nuclear Quantum Tunnelling in Enzymes and the Crossover Temperature	87
5.8.	Summary	90
	References	91

Part 3: The Biological Evidence **95**

6.	Molecular Evolution: A Role for Quantum Mechanics in the Dynamics of Molecular Machines that Read and Write DNA	97
----	---	----

Anita Goel

6.1.	Introduction	97
6.2.	Background	98
6.3.	Approach	100
6.3.1.	The information processing power of a molecular motor	102
6.3.2.	Estimation of decoherence times of the motor-DNA complex	103
6.3.3.	Implications and discussion	105
	References	106

7.	Memory Depends on the Cytoskeleton, but is it Quantum?	109
----	--	-----

Andreas Mershin and Dimitri V. Nanopoulos

7.1.	Introduction	109
7.2.	Motivation behind Connecting Quantum Physics to the Brain	111
7.3.	Three Scales of Testing for Quantum Phenomena in Consciousness	113
7.4.	Testing the QCI at the 10 nm–10 μ m Scale	115

7.5.	Testing for Quantum Effects in Biological Matter Amplified from the 0.1 nm to the 10 nm Scale and Beyond	117
7.6.	Summary and Conclusions	120
7.7.	Outlook	121
	References	121
8.	Quantum Metabolism and Allometric Scaling Relations in Biology	127
	<i>Lloyd Demetrius</i>	
8.1.	Introduction	127
8.2.	Quantum Metabolism: Historical Development	131
8.2.1.	Quantization of radiation oscillators	131
8.2.2.	Quantization of material oscillators	132
8.2.3.	Quantization of molecular oscillators	133
8.2.4.	Material versus molecular oscillators	135
8.3.	Metabolic Energy and Cycle Time	136
8.3.1.	The mean energy	137
8.3.2.	The total metabolic energy	138
8.4.	The Scaling Relations	140
8.4.1.	Metabolic rate and cell size	140
8.4.2.	Metabolic rate and body mass	140
8.5.	Empirical Considerations	141
8.5.1.	Scaling exponents	142
8.5.2.	The proportionality constant	144
	References	144
9.	Spectroscopy of the Genetic Code	147
	<i>Jim D. Bashford and Peter D. Jarvis</i>	
9.1.	Background: Systematics of the Genetic Code	147
9.1.1.	RNA translation	149
9.1.2.	The nature of the code	151
9.1.3.	Information processing and the code	154
9.2.	Symmetries and Supersymmetries in the Genetic Code	156
9.2.1.	$sl(6/1)$ model: $UA+S$ scheme	158
9.2.2.	$sl(6/1)$ model: $3\mathbb{C}\mathbb{H}$ scheme	161
9.2.3.	Dynamical symmetry breaking and third base wobble	164

9.3.	Visualizing the Genetic Code	168
9.4.	Quantum Aspects of Codon Recognition	174
9.4.1.	N(34) conformational symmetry	175
9.4.2.	Dynamical symmetry breaking and third base wobble	177
9.5.	Conclusions	180
	References	181
10.	Towards Understanding the Origin of Genetic Languages	187
	<i>Apoorva D. Patel</i>	
10.1.	The Meaning of It All	187
10.2.	Lessons of Evolution	190
10.3.	Genetic Languages	193
10.4.	Understanding Proteins	195
10.5.	Understanding DNA	201
10.6.	What Preceded the Optimal Languages?	204
10.7.	Quantum Role?	211
10.8.	Outlook	215
	References	217

Part 4: Artificial Quantum Life 221

11.	Can Arbitrary Quantum Systems Undergo Self-replication?	223
	<i>Arun K. Pati and Samuel L. Braunstein</i>	
11.1.	Introduction	223
11.2.	Formalizing the Self-replicating Machine	225
11.3.	Proof of No-self-replication	226
11.4.	Discussion	227
11.5.	Conclusion	228
	References	229
12.	A Semi-quantum Version of the Game of Life	233
	<i>Adrian P. Flitney and Derek Abbott</i>	
12.1.	Background and Motivation	233
12.1.1.	Classical cellular automata	233

12.1.2.	Conway's game of life	234
12.1.3.	Quantum cellular automata	237
12.2.	Semi-quantum Life	238
12.2.1.	The idea	238
12.2.2.	A first model	239
12.2.3.	A semi-quantum model	242
12.2.4.	Discussion	244
12.3.	Summary	247
	References	248
13.	Evolutionary Stability in Quantum Games	251
	<i>Azhar Iqbal and Taksu Cheon</i>	
13.1.	Evolutionary Game Theory and Evolutionary Stability	253
13.1.1.	Population setting of evolutionary game theory	256
13.2.	Quantum Games	256
13.3.	Evolutionary Stability in Quantum Games	261
13.3.1.	Evolutionary stability in EWL scheme	263
13.3.2.	Evolutionary stability in MW quantization scheme	268
13.4.	Concluding Remarks	286
	References	288
14.	Quantum Transmemetic Intelligence	291
	<i>Edward W. Piotrowski and Jan Stadkowski</i>	
14.1.	Introduction	291
14.2.	A Quantum Model of Free Will	294
14.3.	Quantum Acquisition of Knowledge	298
14.4.	Thinking as a Quantum Algorithm	300
14.5.	Counterfactual Measurement as a Model of Intuition	301
14.6.	Quantum Modification of Freud's Model of Consciousness	304
14.7.	Conclusion	306
	References	307

Part 5: The Debate	311
15. Dreams versus Reality: Plenary Debate Session on Quantum Computing	313
16. Plenary Debate: Quantum Effects in Biology: Trivial or Not?	349
17. Nontrivial Quantum Effects in Biology: A Skeptical Physicists' View	381
<i>Howard Wiseman and Jens Eisert</i>	
17.1. Introduction	381
17.2. A Quantum Life Principle	382
17.2.1. A quantum chemistry principle?	382
17.2.2. The anthropic principle	384
17.3. Quantum Computing in the Brain	385
17.3.1. Nature did everything first?	385
17.3.2. Decoherence as the make or break issue	386
17.3.3. Quantum error correction	387
17.3.4. Uselessness of quantum algorithms for organisms	389
17.4. Quantum Computing in Genetics	390
17.4.1. Quantum search	390
17.4.2. Teleological aspects and the fast-track to life	392
17.5. Quantum Consciousness	392
17.5.1. Computability and free will	392
17.5.2. Time scales	394
17.6. Quantum Free Will	395
17.6.1. Predictability and free will	395
17.6.2. Determinism and free will	396
References	398
18. That's Life!—The Geometry of π Electron Clouds	403
<i>Stuart Hameroff</i>	
18.1. What is Life?	403
18.2. Protoplasm: Water, Gels and Solid Non-polar Regions	405
18.3. Van der Waals Forces	407
18.4. Kekule's Dream and π Electron Resonance	409
18.5. Proteins—The Engines of Life	413

18.6. Anesthesia and Consciousness	418
18.7. Cytoskeletal Geometry: Microtubules, Cilia and Flagella .	419
18.8. Decoherence	423
18.9. Conclusion	425
References	427
Appendix 1. Quantum Computing in DNA π Electron Stacks .	430
Appendix 2. Penrose-Hameroff Orch OR Model	432
