<i>Preface</i>	v
1. Basic Concepts in Mathematical Finance	1
1.1 Price Processes	1
1.2 No-arbitrage and Martingale Measures	1
1.3 Complete and Incomplete Markets	2
1.4 Fundamental Theorems	2
1.5 The Black–Scholes Model	3
1.6 Properties of the Black–Scholes Model	4
1.6.1 Distribution of log returns	4
1.6.2 Historical volatility and implied volatility	4
1.7 Generalization of the Black–Scholes Model	5
1.7.1 Geometric Lévy process models	5
1.7.2 Stochastic volatility models	5
Notes	6
2. Lévy Processes and Geometric Lévy Process Models	7
2.1 Lévy Processes	7
2.1.1 Definitions and properties	7
2.1.2 Infinitely divisible distributions	8
2.1.3 Canonical representation of Lévy processes	11
2.2 Geometric Lévy Process Models	12
2.2.1 The geometric Brownian motion model	13
2.2.2 Geometric compound Poisson models	13
2.2.3 Jump-diffusion models	15
2.2.4 Geometric variance gamma models	15

2.2.5	Geometric stable process models	16
2.2.6	Geometric CGMY models	17
2.3	Doléans-Dade Exponential	18
Notes	20
3.	Equivalent Martingale Measures	21
3.1	Equivalent Martingale Measure Methods	21
3.2	Equivalent Martingale Measures for Geometric Lévy Processes	22
3.2.1	Candidates for suitable equivalent martingale measure	22
3.3	Methods for Construction of Martingale Measures	23
3.3.1	Variance optimal martingale measure (VOMM)	23
3.3.2	Minimal entropy martingale measure (MEMM)	25
Notes	26
4.	Esscher-Transformed Martingale Measures	29
4.1	Esscher Transformation	29
4.2	Esscher-Transformed Martingale Measure for Geometric Lévy Processes	30
4.2.1	Simple-return process and compound-return process	30
4.2.2	Two kinds of Esscher-transformed martingale measure	32
4.3	Existence Theorems of $P^{(ESSMM)}$ and $\hat{P}^{(ESSMM)}$ for Geometric Lévy Processes	33
4.3.1	Existence theorem of $P^{(ESSMM)}$	33
4.3.2	Existence theorem of $\hat{P}^{(ESSMM)}$	35
4.4	Comparison of $P^{(ESSMM)}$ and $\hat{P}^{(ESSMM)}$	39
4.5	Other Examples of Esscher-Transformed Martingale Measures	40
Notes	40
5.	Minimax Martingale Measures and Minimal Distance Martingale Measures	41
5.1	Utility Function, Duality, and Minimax Martingale Measures	41
5.2	Distance Function Corresponding to Utility Function	42

5.3	Minimal Distance Martingale Measures	45
	Notes	45
6.	Minimal Distance Martingale Measures for Geometric Lévy Processes	47
6.1	Minimal Distance Problem	47
6.2	The Minimal Variance Equivalent Martingale Measure (MVEMM)	53
6.2.1	Deterministic problem	54
6.2.2	Existence theorem of the MVEMM	58
6.2.3	Generating triplet of Z_t under MVEMM	62
6.3	The Minimal L^q Equivalent Martingale Measure	63
6.3.1	The case of $q > 1$	64
6.3.2	The case of $0 < q < 1$	65
6.3.3	The case of $q < 0$	66
6.4	Minimal Entropy Martingale Measures	67
6.5	Convergence of ML^q EMM to MEMM (as $q \downarrow 1$)	69
	Notes	73
7.	The [GLP & MEMM] Pricing Model	75
7.1	The Model	75
7.1.1	Sufficient condition for the existence of MEMM	76
7.1.2	Properties of geometric Lévy processes under MEMM	78
7.2	Examples of [GLP & MEMM] Pricing Model	79
7.2.1	Geometric (Brownian motion + compound Poisson) model (or jump-diffusion model) ([GJD & MEMM])	79
7.2.2	Geometric variance gamma model ([GVG & MEMM])	80
7.2.3	Geometric stable process model ([GSP & MEMM])	82
7.2.4	Geometric CGMY model ([GCGMY & MEMM])	84
7.3	Why the Geometric Lévy Process?	85
7.4	Why the MEMM?	85
7.5	Comparison of Equivalent Martingale Measures for Geometric Lévy Processes	88

7.5.1	Corresponding risk process relating to Esscher-transformed MM	88
7.5.2	Integrability condition of Lévy measures for the existence of martingale measures	88
7.5.3	Corresponding utility function	90
7.6	The Explicit Form of Lévy Measure of Z_t under an Equivalent Martingale Measure	91
7.6.1	General form of Lévy measure of Z_t under equivalent martingale measures	91
7.6.2	Geometric variance gamma model	92
7.6.3	Geometric stable process model	94
7.6.4	Geometric CGMY model	94
7.6.5	Merton model (jump-diffusion model)	96
Notes	97
8.	Calibration and Fitness Analysis of the [GLP & MEMM] Model	99
8.1	The Physical World and the MEMM World	99
8.1.1	From the physical world to the MEMM world . .	99
8.1.2	From the MEMM world to the physical world . .	100
8.1.3	Calibration problem and fitness analysis	101
8.2	Reproducibility of Volatility Smile/Smirk Property of the [GLP & MEMM] Model	101
8.2.1	Implied volatility of the model	102
8.2.2	[Geometric Variance Gamma Process & MEMM] model	103
8.2.3	[Geometric CGMY Process & MEMM] model . .	103
8.2.4	[Geometric Stable Process & MEMM] model . . .	104
8.3	Calibration of [GLP & MEMM] Pricing Model	105
8.3.1	Pricing error	106
8.3.2	Minimization problem	107
8.3.3	Procedure of calibration	107
8.4	Fitness Analysis	109
8.4.1	Procedure of fitness analysis	109
Notes	110
9.	The [GSP & MEMM] Pricing Model	111
9.1	The Physical World and the MEMM World	111

9.1.1	From the physical world to the MEMM world (GSP case)	112
9.1.2	From the MEMM world to the physical world (GSP case)	113
9.2	Calibration by the [GSP & MEMM] Pricing Model	113
9.2.1	Calibration in the physical world	114
9.2.2	Calibration in the MEMM world	114
9.3	Application of the Calibrated Process to Dollar-Yen Currency Options	115
9.3.1	Fact: the implied volatility curve of currency options	115
9.3.2	In-sample analysis	116
9.3.3	Out-of-sample analysis	117
9.3.4	Volatility-based calibration	117
Notes	119
10.	The Multi-Dimensional [GLP & MEMM] Pricing Model	121
10.1	Multi-Dimensional Lévy Processes	121
10.2	Multi-Dimensional Geometric Lévy Processes	123
10.3	Esscher MM and MEMM	124
10.3.1	Equivalent martingale measures	125
10.3.2	Esscher martingale measures	125
10.3.3	Minimal entropy martingale measures	126
10.3.4	[GLP & MEMM] pricing model	127
10.4	Application to Portfolio Evaluation	127
10.4.1	Geometric Lévy process portfolio model	127
10.4.2	Risk-sensitive value measure	128
10.4.3	Risk-sensitive evaluation of portfolio	129
10.4.4	Re-balancing portfolios	131
10.5	Risk-Sensitive Evaluation of Growth Rate	132
10.5.1	Risk-sensitive evaluation of RIRR	133
10.5.2	Risk-sensitive evaluation of re-balancing portfolios	135
10.5.3	Risk-sensitive evaluation of a single asset	139
Notes	140
Appendix A	Estimation	141
A.1	Method of Moments	141
A.1.1	Classical method of moments	141

A.1.2	Generalized method of moments (= characteristic function method)	145
A.1.3	Estimation of Lévy processes	146
A.2	Examples	147
A.2.1	Compound Poisson process with normal Lévy measures	147
A.2.2	Jump-diffusion process (compound Poisson diffusion process)	148
A.2.3	Stable process	150
A.2.4	Variance gamma process	153
A.2.5	CGMY process	157
Notes	171
