Preface	v
1 Relativistic Gravity	1
1.1 What is a black hole?	1
1.2 Why study black holes?	3
1.3 Elements of general relativity	3
1.3.1 The principle of equivalence	3
1.3.2 The Newtonian affine connection	4
1.3.3 Newtonian gravity	5
1.3.4 Metrics in relativity	6
1.3.5 The velocity and momentum 4-vector	7
1.3.6 General vectors and tensors	8
1.3.7 Locally measured physical quantities	9
1.3.8 Derivatives in relativity	9
1.3.9 Acceleration 4-vector	11
1.3.10 Paths of light	11
1.3.11 Einstein's field equations	11
1.3.12 Symmetry and Killing's equation	12
2 Spherical Black Holes	15
2.1 The Schwarzschild metric	15
2.1.1 Coordinates	16
2.1.2 Proper distance	17
2.1.3 Proper time	17
2.1.4 Redshift	17
2.1.5 Interpretation of M and geometric units	18
2.1.6 The Schwarzschild radius	18
2.1.7 The event horizon	19
2.1.8 Birkoff's theorem	19
2.1.9 Israel's theorem	19
2.2 Orbits in Newtonian gravity	20
2.2.1 Newtonian Energy	20

2.2.2	Angular momentum	20
2.2.3	The Newtonian effective potential	20
2.2.4	Classification of Newtonian orbits	21
2.3	Particle orbits in the Schwarzschild metric	21
2.3.1	Constants of the motion	22
2.3.2	Conserved Energy	22
2.3.3	Angular momentum	23
2.3.4	The effective potential	24
2.3.5	Newtonian approximation to the metric	24
2.3.6	Classification of orbits	25
2.3.7	Radial infall	25
2.3.8	The locally measured energy of a particle	26
2.3.9	Circular orbits	27
2.3.10	Comparison with Newtonian orbits	28
2.3.11	Orbital velocity in the frame of a hovering observer	29
2.3.12	Energy in the last stable orbit	30
2.4	Orbits of light rays	31
2.4.1	Radial propagation of light	32
2.4.2	Capture cross-section for light	33
2.4.3	The view of the sky for a stationary observer	34
2.5	Classical tests	36
2.6	Falling into a black hole	36
2.6.1	Free-fall time for a distant observer	37
2.6.2	Light-travel time	38
2.6.3	What the external observer sees	38
2.6.4	An infalling observer's time	39
2.6.5	What the infalling observer feels	40
2.7	Capture by a black hole	41
2.7.1	Case I: Capture of high angular momentum particles	41
2.7.2	Case II: Capture of low energy particles	42
2.8	Surface gravity of a black hole	42
2.8.1	The proper acceleration of a hovering observer	42
2.8.2	Surface gravity	43
2.8.3	Rindler coordinates	44
2.9	Other coordinates	46
2.9.1	Null coordinates	46
2.9.2	Eddington–Finkelstein coordinates	47
2.10	Inside the black hole	47
2.10.1	The infalling observer	49
2.11	White holes	50
2.12	Kruskal coordinates	50
2.12.1	The singularities at $r = 0$ and cosmic censorship	52

2.12.2	The spacetime of a collapsing star	52
2.13	Embedding diagrams	53
2.14	Asymptotic flatness	55
2.14.1	The Penrose–Carter diagram for the Schwarzschild metric	57
2.14.2	The Penrose–Carter diagram for the Newtonian metric	57
2.15	Non-isolated black holes	58
2.15.1	The infinite redshift surface	58
2.15.2	Trapped surfaces	58
2.15.3	Apparent horizon	58
2.16	The membrane paradigm	59
3	Rotating Black Holes	61
3.1	The Kerr metric	62
3.2	The event horizon	62
3.2.1	The circumference of the event horizon	63
3.2.2	The area of the event horizon	63
3.3	Properties of the Kerr metric coefficients	64
3.3.1	Identities	64
3.3.2	Contravariant components	64
3.4	Interpretation of m , a and geometric units	65
3.5	Extreme Kerr black hole	66
3.6	Robinson’s theorem	66
3.7	Particle orbits in the Kerr geometry	66
3.7.1	Constants of the motion	67
3.7.2	Energy	68
3.7.3	Angular momentum	69
3.7.4	The Carter integral	69
3.7.5	The radial equation	70
3.7.6	The effective potential	71
3.8	Frame-dragging	72
3.8.1	Free fall with zero angular momentum	73
3.8.2	Orbits with non-zero angular momentum	74
3.9	Zero angular momentum observers (ZAMOs)	75
3.9.1	Some applications of ZAMOs	76
3.10	Photon orbits	77
3.10.1	The photon effective potential	77
3.10.2	Azimuthal motion	78
3.10.3	Photon capture cross-section	78
3.11	The static limit surface	79
3.12	The infinite redshift surface	81
3.13	Circular orbits in the equatorial plane	81
3.13.1	Innermost (marginally) stable circular orbit	82

3.13.2	Period of a circular orbit	84
3.13.3	Energy of the innermost stable orbit	85
3.13.4	Angular momentum of the innermost stable orbit	85
3.13.5	Marginally bound orbits	86
3.13.6	Unbound orbits	86
3.14	Polar orbits	87
3.14.1	Orbital period	90
3.15	The ergosphere	90
3.15.1	Negative energy orbits	90
3.15.2	Energy and angular momentum	92
3.15.3	The Penrose process	93
3.15.4	Realising the Penrose process	93
3.16	Spinning up a black hole	95
3.16.1	From Schwarzschild to extreme Kerr black hole	96
3.17	Other coordinates	97
3.18	Penrose–Carter diagram	99
3.18.1	Interior solutions and collapsing stars	102
3.19	Closed timelike lines	103
3.20	Charged black holes	104
4	Black Hole Thermodynamics	107
4.1	Black hole mechanics	107
4.1.1	Surface gravity	107
4.1.2	Redshift	109
4.1.3	Conservation of energy	110
4.2	The area of a Kerr black hole horizon cannot decrease	111
4.2.1	Area change by accretion	111
4.2.2	Area change produced by the Penrose process	112
4.2.3	The area theorem	113
4.2.4	Irreducible mass	113
4.2.5	Maximum energy extraction	114
4.2.6	Naked singularities	114
4.3	Scattering of waves	115
4.3.1	Superradiance	115
4.4	Thermodynamics	120
4.4.1	Horizon temperature	122
4.4.2	The four laws of black hole thermodynamics	124
4.5	Hawking radiation	125
4.5.1	Introduction	125
4.5.2	Casimir effect	126
4.5.3	Thermal vacua in accelerated frames	127
4.5.4	Hawking radiation	131

4.6	Properties of radiating black holes	135
4.6.1	Entropy and temperature	135
4.6.2	Radiating black holes	136
4.6.3	Black hole in a box	137
4.7	Entropy and microstates	139
5	Wormholes and Time Travel	141
5.1	Introduction	141
5.2	Wormholes	141
5.3	Traversable wormholes	143
5.4	Creating a wormhole	145
5.5	Weak energy condition	146
5.6	Exotic matter	147
5.7	Time machines	148
5.8	Chronology protection	150
6	Astrophysical Black Holes	151
6.1	Introduction	151
6.2	Stellar mass black holes	152
6.2.1	Formation	152
6.2.2	Finding stellar mass black holes	154
6.2.3	The black hole at the centre of the Galaxy	155
6.3	Supermassive black holes in other galaxies	156
6.3.1	Intermediate mass black holes	157
6.3.2	Mini black holes	158
6.4	Further evidence for black hole spin	159
6.5	Conclusions	160
	Solutions to Problems	163
	References	189
	Bibliography	193
	Index	195
