| <i>Preface</i> | vii |
| 1. Introduction and Overview | 1 |
| 1.1 Dynamical Systems as a Context | 2 |
| 1.2 Continuous Media as a Subject | 5 |
| 1.3 From Simple to Complex | 9 |
| 1.3.1 Thermal convection: the instability mechanism . . | 10 |
| 1.3.2 Nonlinear convection and dynamical systems . . . | 12 |
| 1.3.3 Complexity in dynamical systems | 14 |
| 1.3.4 Stability and instability of open flows | 19 |
| 1.3.5 Beyond the transition: fully developed turbulence | 21 |
| 1.4 More on Complexity and its Modelling | 24 |
| 1.4.1 Reacting systems, from chemistry to ecology . . . | 25 |
| 1.4.2 Modelling distributed systems | 27 |
| 1.4.3 Phase transitions and critical phenomena | 32 |
| 1.4.4 Concluding remarks | 35 |
| 1.5 Exercises | 35 |
| 2. First Steps in Nonlinear Dynamics | 39 |
| 2.1 From Oscillators to Dynamical Systems | 39 |
| 2.1.1 First definitions | 39 |
| 2.1.2 Formalism of analytical mechanics | 45 |
| 2.1.3 Gradient systems | 47 |
| 2.2 Stability and Linear Dynamics | 49 |
| 2.2.1 Formulation of the linear stability problem | 49 |
| 2.2.2 Two-dimensional linear systems | 51 |

| | | |
|-------|---|-----|
| 2.2.3 | Stability of a time-independent regime | 55 |
| 2.3 | Two-dimensional Nonlinear Systems | 57 |
| 2.3.1 | Two examples of oscillators | 57 |
| 2.3.2 | Amplitude and phase of nonlinear oscillators . . . | 63 |
| 2.4 | What Next? | 73 |
| 2.5 | Exercises | 73 |
| 3. | Life and Death of Dissipative Structures | 83 |
| 3.1 | Emergence of Dissipative Structures | 83 |
| 3.1.1 | Qualitative analysis of the instability mechanism . | 83 |
| 3.1.2 | Simplified model | 85 |
| 3.1.3 | Normal mode analysis, general perspective | 86 |
| 3.1.4 | Back to the model | 89 |
| 3.1.5 | Vicinity of the threshold: linear stage | 93 |
| 3.1.6 | Classification of unstable modes | 95 |
| 3.2 | Disintegration of Dissipative Structures | 97 |
| 3.2.1 | Simplified model of nonlinear convection | 97 |
| 3.2.2 | Transition to turbulence of convection cells | 100 |
| 3.2.3 | Transition toward chaos in confined systems . . . | 104 |
| 3.2.4 | Dynamics of textures in extended systems | 107 |
| 3.2.5 | Turbulent convection | 111 |
| 3.3 | Exercises | 113 |
| 4. | Nonlinear Dynamics: from Simple to Complex | 125 |
| 4.1 | Reduction of the Number of Degrees of Freedom | 126 |
| 4.1.1 | Role of aspect ratios | 126 |
| 4.1.2 | Low-dimensional effective dynamics | 128 |
| 4.1.3 | Centre manifolds and normal forms | 131 |
| 4.2 | Transition to Chaos | 135 |
| 4.2.1 | Time-independent and periodic regimes | 135 |
| 4.2.2 | Quasi-periodicity and resonance | 140 |
| 4.2.3 | Quasi-periodicity and locking | 146 |
| 4.3 | Beyond Quasi-Periodicity | 154 |
| 4.3.1 | Dynamics on stable and unstable manifolds | 156 |
| 4.3.2 | Nature of chaotic regimes | 157 |
| 4.3.3 | Two classical scenarios of transition to chaos . . . | 159 |
| 4.4 | Exercises | 163 |

| | | |
|-------|--|-----|
| 5. | Characterising and Using Chaos | 171 |
| 5.1 | Quantifying Chaos | 171 |
| 5.1.1 | Instability of trajectories and Lyapunov exponents | 171 |
| 5.1.2 | Fractal features | 174 |
| 5.2 | Empirical Approach to Chaotic Systems | 177 |
| 5.2.1 | Standard analysis using Fourier transforms | 179 |
| 5.2.2 | Reconstruction using delays | 181 |
| 5.2.3 | Sampling frequency and embedding dimension | 184 |
| 5.2.4 | Application | 188 |
| 5.3 | Mixing by Stirring | 191 |
| 5.3.1 | Mixing: diffusion or/and advection? | 191 |
| 5.3.2 | Time-periodic two-dimensional configurations | 195 |
| 5.3.3 | Time-dependent two-dimensional open flows | 201 |
| 5.3.4 | Time-independent three-dimensional open flows | 204 |
| 5.4 | Control of Chaos | 205 |
| 5.4.1 | Synchronisation of dynamical systems | 205 |
| 5.4.2 | Delay systems and chaos control using delays | 211 |
| 5.4.3 | The OGY method | 215 |
| 5.5 | Conclusions | 220 |
| 5.6 | Exercises | 220 |
| 6. | Nonlinear Dynamics of Patterns | 227 |
| 6.1 | Quasi-one-dimensional Cellular Structures | 228 |
| 6.1.1 | Steady states | 228 |
| 6.1.2 | Amplitude equations | 230 |
| 6.2 | Dissipative Crystals | 232 |
| 6.3 | Short Term Selection of Patterns | 235 |
| 6.4 | Modulations and Envelope Equations | 236 |
| 6.4.1 | Quasi-one-dimensional cellular patterns | 237 |
| 6.4.2 | Two-dimensional modulations of quasi-1D patterns | 238 |
| 6.4.3 | Quasi-two-dimensional cellular patterns | 240 |
| 6.4.4 | Oscillatory patterns and dissipative waves | 242 |
| 6.4.5 | Universal long-wavelength instabilities | 244 |
| 6.5 | What Lies Beyond? | 249 |
| 6.6 | Exercises | 250 |
| 7. | Open Flows: Instability and Transition | 255 |
| 7.1 | Base Flow Profiles | 257 |

| | | |
|-------|---|-----|
| 7.1.1 | Strictly one-dimensional flows | 257 |
| 7.1.2 | More general velocity profiles | 259 |
| 7.1.3 | Extension to arbitrary profiles | 262 |
| 7.2 | Linear Stability | 262 |
| 7.2.1 | General framework | 262 |
| 7.2.2 | Inviscid flows | 266 |
| 7.2.3 | Viscous flows | 273 |
| 7.2.4 | Instability and downstream transport | 276 |
| 7.3 | Transition to Turbulence | 282 |
| 7.3.1 | Nonlinear development of instabilities | 282 |
| 7.3.2 | Inviscidly unstable flows | 286 |
| 7.3.3 | Inviscidly stable flows | 291 |
| 7.3.4 | Turbulent spots and intermittency | 295 |
| 7.4 | Exercises | 307 |
| 8. | Developed Turbulence | 313 |
| 8.1 | Scales in Developed Turbulence | 314 |
| 8.1.1 | Production scale | 314 |
| 8.1.2 | Inertial scales and the Kolmogorov spectrum | 316 |
| 8.1.3 | Dissipation scales | 318 |
| 8.1.4 | Remarks | 320 |
| 8.2 | Mean Flow and Fluctuations | 321 |
| 8.2.1 | Statistical approach | 321 |
| 8.2.2 | Reynolds averaged Navier–Stokes equation | 322 |
| 8.2.3 | Energy exchanges in a turbulent flow | 324 |
| 8.3 | Mean Flow and Effective Diffusion | 325 |
| 8.3.1 | Mixing length and eddy viscosity | 325 |
| 8.3.2 | Determination of the mean flow | 327 |
| 8.4 | Beyond the Elementary Approach | 332 |
| 8.4.1 | The structure of turbulent flows | 332 |
| 8.4.2 | Turbulence modelling | 336 |
| 8.4.3 | Large eddy simulations | 339 |
| 8.5 | Exercises | 343 |
| 9. | Summary and Perspectives | 347 |
| 9.1 | Dynamics, Stability and Chaos | 348 |
| 9.2 | Continuous Media, Instabilities and Turbulence | 352 |
| 9.3 | Approach to a Complex System: the Earth’s Climate | 356 |

| | | |
|------------|---|-----|
| 9.4 | Exercise: Ice ages as catastrophes | 371 |
| Appendix A | Linear Algebra | 375 |
| A.1 | Vector Spaces, Bases, and Linear Operators | 375 |
| A.2 | Structure of a Linear Operator | 378 |
| A.2.1 | Jordan normal form | 379 |
| A.2.2 | Exponential of a matrix | 382 |
| A.2.3 | Perturbation of a linear problem | 383 |
| A.3 | Metric Properties of Linear Operators | 387 |
| A.3.1 | Scalar products, adjoints, non-normal operators | 387 |
| A.3.2 | Fredholm Alternative | 389 |
| A.3.3 | Boundary value problems and adjoint operators | 390 |
| A.4 | Application to linear control in state space | 391 |
| A.5 | Exercises | 395 |
| Appendix B | Numerical Approach | 399 |
| B.1 | Treatment of the Time Dependence | 400 |
| B.2 | Treatment of Space Dependence in PDEs | 406 |
| B.2.1 | Finite difference methods | 406 |
| B.2.2 | Spectral methods | 411 |
| B.3 | Exercises | 417 |
| B.4 | Case studies | 418 |
| B.4.1 | ODEs 1: Forced pendulum | 419 |
| B.4.2 | ODEs 2: Lorenz model | 420 |
| B.4.3 | ODEs 3: Rössler and Chua models | 424 |
| B.4.4 | PDEs 1: SH model, finite differences | 425 |
| B.4.5 | PDEs 2: SH model, pseudo-spectral method | 428 |
| | <i>Bibliography</i> | 431 |
| | <i>Index</i> | 435 |
