

CONTENTS

Preface	v
Session I: Calculations of Atomic and Molecular Properties	1
The Transition from Mathematician to Astrophysicist <i>M. R. Flannery</i>	3
Calculations of Atomic and Molecular Properties <i>G. W. F. Drake</i>	9
An Elastic Approximation for Spin Flipping Transitions in Collisions of Hydrogen Atoms <i>B. Zygelman</i>	25
Matrix Element Sums Evaluated <i>via</i> Differential Equations in Calculations of Atomic and Molecular Properties <i>Michael Jamieson</i>	41
Linear Response Time Dependent Density Functional Theory for Dispersion Coefficients Between Atomic Pairs <i>Xi Chu and G. C. Groenenboom</i>	56
Session II: Astrochemistry	67
Some Thoughts on Interstellar Chemistry <i>William Klemperer</i>	69
Astrochemistry: Building on Dalgarno's Legacy <i>Ewine F. van Dishoeck</i>	72
Atomic and Molecular Probes for Astronomical Environments <i>Stephen H. Lepp</i>	90

H ⁻ Photodetachment in Atomic Physics and Astrophysics <i>P. C. Stancil, S. Miyake, H. R. Sadeghpour, B. M. McLaughlin, and R. C. Forrey</i>	102
Astrochemistry: An Unfinished Symphony <i>John H. Black</i>	117
Session III: Interstellar Medium and Molecular Astrophysics	125
Still More Thoughts on Interstellar Chemistry <i>Patrick Thaddeus</i>	127
How Interstellar Chemistry (and Astrochemistry More Generally) Became Useful <i>T. W. Hartquist, S. van Loo, and S. A. E. G. Falle</i>	129
Atoms, Molecules, and Radiation: From Star-Forming Regions to Quasars <i>A. Sternberg</i>	144
Molecular Astrophysics with the Spitzer Space Telescope: Studies of Interstellar Shocks <i>David A. Neufeld</i>	160
A Common Origin for Interstellar CH ⁺ and H ₃ ⁺ <i>Cesare Cecchi-Pestellini</i>	173
Session IV: Atomic and Molecular Processes in the Solar System and Planetary Atmospheres	183
Alexander Dalgarno <i>Jane L. Fox</i>	185
Atomic and Molecular Processes in the Solar System and Planetary Atmospheres: An Overview and Some Examples <i>T. E. Cravens</i>	190

Approach to Thermal Equilibrium in Atomic Collisions <i>Peng Zhang and Vasili Kharchenko</i>	209
Heliospheric X-rays Induced by Charge-Exchange Collisions <i>V. A. Kharchenko</i>	230
Session V: Ultra-cold Collisions/Long-range Interactions	243
A Tribute to Alex's Leadership and Support: The Examples of Model Potentials and Cold Molecules <i>Françoise Masnou-Seeuws</i>	245
Photoassociation of Ultracold Atoms <i>R. G. Hulet</i>	250
Forming Ultracold Molecules <i>Robin Côté</i>	262
Quantum Theory of Atomic and Molecular Scattering Based on the Fully Uncoupled Space-fixed Representation <i>R. V. Krems</i>	281
Collisions and Reactions in Ultracold Gases <i>N. Balakrishnan</i>	296
Session VI: Undergraduate Collaborations	313
The HFS of H_2^+ : Electron-Nuclear Coupling of Spins and Momenta <i>James F. Babb</i>	315
Molecular Clouds and Chemistry Beyond the Milky Way <i>Jean L. Turner</i>	320
Atom-Optical Analogs of Electronic Components and Devices <i>R. A. Pepino, J. Cooper, D. Z. Anderson, and M. J. Holland</i>	328
Quantum Metrology and Simulation <i>J. M. Taylor</i>	340

Session VII: ITAMP History and Highlights	355
The Beginnings of ITAMP – Proposals from the AMO Community and the NSF Response <i>R. H. Pratt</i>	357
History of ITAMP: Part II – The Institute Strikes Back <i>Barry I. Schneider</i>	367
ITAMP History: Part III <i>Kate Kirby</i>	372
Symposium Dinner Speech <i>Neal Lane</i>	379
