Preface	v
Part I: Opening and Themes	1
1. Introduction and Aspirations	3
2. Optimal Statistical Procedures	9
2.1. The optimisation of actions	9
2.2. Effective estimation of state	12
2.3. The quadratic/Gaussian case: Estimation and certainty equivalence	13
2.4. The linear model, in Bayesian and classic versions . . .	15
3. Linear Links and Nonlinear Knots: The Basic Neural Net	17
3.1. Neural calculations: The linear gate and the McCulloch–Pitts net	17
3.2. Sigmoid and threshold functions	21
3.3. Iteration	22
3.4. Neural systems and feedback in continuous time . . .	26
3.5. Equilibrium excitation patterns	28
3.6. Some special-purpose nets	28
4. Bifurcations and Chaos	33
4.1. The Hopf bifurcation	33
4.2. Chaos	35

Part II: Associative and Storage Memories	41
5. What is a Memory? The Hamming and Hopfield Nets	43
5.1. Associative memories	43
5.2. The Hamming net	45
5.3. Autoassociation, feedback and storage	47
5.4. The Hopfield net	50
5.5. Alternative formulations of the Hopfield net	52
6. Compound and ‘Spurious’ Traces	54
6.1. Performance and trace structure	54
6.2. The recognition of simple traces	55
6.3. Inference for compound traces	57
6.4. Network realisation of the quantised regression	59
6.5. Reliability constraints for the quantised regression	60
6.6. Stability constraints for the quantised regression	62
6.7. The Hopfield net	64
7. Preserving Plasticity: A Bayesian Approach	69
7.1. A Bayesian view	69
7.2. A robust estimation method	72
7.3. Dynamic and neural versions of the algorithm	74
8. The Key Task: the Fixing of Fading Data.	
Conclusions I	76
8.1. Fading data, and the need for quantisation	76
8.2. The probability-maximising algorithm (PMA)	78
8.3. Properties of the vector activation function $F(z)$	81
8.4. Some special cases	83
8.5. The network realisation of the full PMA	85
8.6. Neural implementation of the PMA	89
8.7. The PMA and the exponential family	92
8.8. Conclusions I	93
9. Performance of the Probability-Maximising Algorithm	96
9.1. A general formulation	96
9.2. Considerations for reliable inference	98

9.3.	Performance of the PMA for simple stimuli	100
9.4.	Compound stimuli: The general pattern	103
9.5.	Compound stimuli in the Gaussian case	107
10.	Other Memories — Other Considerations	109
10.1.	The supervised learning of a linear relation	109
10.2.	Unsupervised learning: The criterion of economy	111
10.3.	Principal components	112
10.4.	The learning of an optimal reduction	115
10.5.	Dual variables, back-propagation and Hebb's rule	117
10.6.	Self-organising feature maps	120
10.7.	Other proposals	124
Part III:	Oscillatory Operation and the Biological Model	127
11.	Neuron Models and Neural Masses	131
11.1.	The biological neuron	131
11.2.	Neural masses: Reduced dynamics	134
11.3.	Neural masses: Full dynamics and the tank/sump model	137
11.4.	Systems of neural units (masses)	142
11.5.	The Freeman oscillator	142
11.6.	Numerical solution for the Freeman oscillator	146
11.7.	The evidence of EEG traces	148
12.	Freeman Oscillators — Solo and in Concert	152
12.1.	Systems of neural units	152
12.2.	The case of simple positive feedback	157
12.3.	Systems of coupled oscillators	159
12.4.	The Freeman oscillator with positive feedback	160
12.5.	Numerical results for the oscillator with feedback	165
12.6.	A block of oscillators	168
12.7.	A chain of oscillators	169
12.8.	Feedback plus standardisation: An essential mechanism	170
12.9.	Numerical results for the standardised oscillator	173
12.10.	Some notes on the literature	175

13. Associative Memories Incorporating the Freeman Oscillator	179
13.1. Safe data: Adaptation of the Bayesian inferential net	179
13.2. The oscillatory version of the one-stage PMA	181
13.3. The oscillatory version of the two-stage PMA	184
13.4. Numerical results for a two-stage system	188
14. Olfactory Comparisons. Conclusions II	190
14.1. The anatomy of the olfactory system	191
14.2. Neural components	195
14.3. Block versions and analogues of the olfactory system	197
14.4. Interpretation	200
14.5. Conclusions II	205
15. Transmission Delays	208
15.1. The Freeman oscillator with feedback	208
15.2. Interacting Freeman oscillators	210
Appendix I Extension of the Wigner Semi-Circle Law	213
Appendix II Realisation of the PMA equation	216
References	219
