Preface	v
List of Tables	xi
List of Figures	xiii
1. Introduction	1
1.1 Discovery of AID	2
1.2 Current Model of AID Function	3
1.3 Open Questions	4
1.4 A Unifying Model for AID Function	6
1.5 Acknowledgements	8
1.6 References	8
2. Switch Regions, Chromatin Accessibility and AID Targeting	12
2.1 Introduction	13
2.2 Transcriptional Elements Determine Long-Range Regulation of CSR	15
2.3 <i>Cis</i> -Regulatory Elements as Recruiters for AID	17
2.4 Transcription and Accessibility to AID Attack	17
2.5 S Region Sequence Determines Chromatin Accessibility	20
2.6 AID-Induced Mutation Distribution and Transcription	21
2.7 Processing of GLTs and the Introduction of AID-Induced Mutations	22
2.8 Future Directions	23
2.9 Acknowledgements	24
2.10 References	24
3. <i>Cis</i> -Regulatory Elements that Target AID to Immunoglobulin Loci	31
3.1 Introduction	32
3.2 Targeting by Ig Promoters – Are High Levels of Transcription All There is to It?	33
3.2.1 Genome-wide SHM	34
3.2.2 Targeting of SHM by promoters	35

3.3	SHM Targeting Elements in Ig Light Chain Loci.....	38
3.3.1	The murine Ig light chain loci.....	38
3.3.2	The chicken IgL locus	40
3.4	Targeting Elements in the Murine IgH Locus	43
3.4.1	Targeting of CSR.....	43
3.4.2	Is enhancement of CSR only secondary to enhancement of germline transcription?.....	48
3.4.3	Targeting of SHM to the murine IgH loci.....	49
3.4.4	Targeting elements for CSR and SHM – A comparison	51
3.5	Outlook.....	52
3.6	Acknowledgements	55
3.7	References	55
4.	Partners in Diversity: The Search for AID Co-Factors.....	62
4.1	Introduction and Overview.....	63
4.2	Compartmentalization of AID.....	66
4.3	The C-Terminal Domain of AID.....	67
4.3.1	Tethering of DNA damage sensors/transducers.....	67
4.3.2	MDM2.....	69
4.4	Targeting AID in the Context of Cotranscriptional Pre-mRNA Splicing by CTNNB1.....	71
4.5	Replication Protein A (RPA).....	72
4.6	Protein Kinase A (PKA) and Regulation of AID Activity by Phosphorylation.....	72
4.7	Recruitment of PKA to Switch Region Sequences.....	75
4.8	Concluding Remarks	77
4.9	Acknowledgements	78
4.10	References	78
5.	Resolution of AID Lesions in Class Switch Recombination.....	83
5.1	Introduction.....	83
5.2	Conversion of AID Lesions to Double-Strand DNA Breaks	84
5.2.1	Uracils in switch region DNA	84
5.2.2	Base excision repair in class switch recombination.....	85
5.2.3	Mismatch repair in class switch recombination	86
5.2.4	Generation of DNA double-strand breaks in switch regions.....	86
5.3	Repair of Double-Strand DNA Breaks in Class Switch Recombination	89
5.3.1	Ku and the initial phase of NHEJ	89
5.3.2	Nucleases for NHEJ.....	90
5.3.3	Polymerases for NHEJ.....	90
5.3.4	Ligases for NHEJ.....	91

5.3.5 Terminal microhomology usage in NHEJ	91
5.3.6 Alternative NHEJ	91
5.4 Concluding Comments and Future Questions	93
5.5 References	93
6. Error-Prone and Error-Free Resolution of AID Lesions in SHM	97
6.1 Introduction	98
6.2 Direct Replication Across the Uracil: G/C Transitions	98
6.3 UNG2-Dependent SHM Across AP Sites: G/C Transversions and Transitions	101
6.4 MutS α -Dependent SHM at MMR Gaps: A/T Mutations	102
6.5 UNG-Dependent A/T Mutations	104
6.6 Half of all G/C Transversions Require MutS α and UNG2	104
6.7 Translesion Synthesis DNA Polymerases	105
6.7.1 Pol η generates most A/T mutations	106
6.7.2 Pol κ can partially compensate for Pol η deficiency	107
6.7.3 TLS polymerase Rev1 generates G to C transversions	107
6.7.4 Pol ι , a story to be finished	108
6.7.5 Pol ζ , an extender polymerase that might be replaceable	109
6.7.6 Pol θ is dispensable during SHM	109
6.7.7 Other TLS polymerases: Pol λ and Pol μ	110
6.8 Regulating TLS by Ubiquitylation of PCNA	110
6.9 SHM: Mutagenesis at Template A/T Requires PCNA-Ub	112
6.10 PCNA-Ub-Independent G/C Transversions During SHM	113
6.11 MutS α and UNG2 do not Compete During SHM: Cell Cycle and Error-Free Repair	114
6.12 Aberrant Targeting of AID and Error-Free Repair of AID-Induced Uracils ..	116
6.13 Acknowledgements	119
6.14 References	119
7. Regulatory Mechanisms of AID Function	127
7.1 Introduction	128
7.2 Transcriptional Regulation of AID Gene Expression	128
7.2.1 Expression of AID in and outside B cells	128
7.2.2 Signal transduction pathways leading to <i>Aicda</i> induction	130
7.2.3 Transcription factors inducing AID	131
7.2.4 AID haploinsufficiency	135
7.3 Posttranscriptional Regulation of mRNA Levels	137
7.3.1 Regulation of AID expression by microRNAs	137
7.3.2 AID alternative splicing	139

7.4	Posttranslational Control of AID	141
7.4.1	AID subcellular localization and stability	141
7.5	Integration of AID Regulation: The Outstanding Questions	144
7.6	Acknowledgements	145
7.7	References	146
8.	AID in Immunodeficiency and Cancer	152
8.1	AID and Immunodeficiencies	153
8.1.1	Autosomal recessive CSR-D caused by bi-allelic <i>Aicda</i> mutations	153
8.1.2	Autosomal dominant CSR-D caused by mono-allelic <i>Aicda</i> mutations	158
8.2	AID and Cancer	159
8.2.1	AID is a mutagen	160
8.2.2	AID is a carcinogen	161
8.2.3	Cancer markers and AID	162
8.2.4	AID regulation and cancer correlation	163
8.3	Acknowledgements	175
8.4	References	175
9.	AID in Aging and in Autoimmune Disease	187
9.1	AID and Aging	188
9.2	Aging Decreases Humoral Immune Responses	189
9.2.1	Molecular mechanisms for reduced CSR in aging	192
9.3	AID in Autoimmunity	198
9.3.1	Potential novel mouse models designed to distinguish the role of SHM, CSR and the naïve repertoire in autoimmunity	200
9.3.2	AID-deficient autoimmune-prone mice	202
9.3.3	AID overexpression effects and autoimmunity in mice	204
9.3.4	AID deficiency and autoimmunity in humans	205
9.4	Conclusion	206
9.5	Acknowledgements	207
9.6	References	207
	Index	215
