<i>Preface</i>	v
<i>An Historical Sketch of the Progress of Opinion on the Origin of Planets</i>	xix
1. Observations of Stars	1
1.1 Locations of Stars	1
1.2 Stellar Material	4
1.3 Determining the Distances of Stars	5
1.3.1 The distances of nearby stars	5
1.3.2 Distance measurements using variable stars	7
1.4 The Temperature of Stars	9
1.5 Stellar Radii	12
1.6 Estimating Stellar Masses	13
1.7 The Physical Properties of Main-Sequence Stars	14
1.8 Stellar Spin Rates	15
1.9 Summary	15
2. Producing Protostars — Embryonic Stars	19
2.1 Star-Forming Regions	19
2.2 The Formation of Dense Cool Clouds	21
2.3 Maser Emission from Star-Forming Regions	26
2.4 The Process of Protostar Formation	27
2.5 The Formation of Binary Systems	28

2.6	Modelling the Collapse of a Cloud	32
2.7	The Spin of Stars	33
2.8	Summary	36
3.	The Life and Death of a Star	39
3.1	The Journey to the Main Sequence	39
3.2	Energy Generation in Main-Sequence Stars	42
3.3	Leaving the Main Sequence for Low- and Moderate-Mass Stars	46
3.4	The Evolution of Higher-Mass Stars	50
3.5	Summary	53
4.	The Evolution of a Galactic Cluster	55
4.1	Embedded Clusters	55
4.2	The Formation of Massive Stars	58
4.3	The Embedded Cluster Environment and Binary Star Frequencies	60
4.4	The Progress of Star Formation in a Galactic Cluster	61
4.5	Summary	62
5.	Exoplanets — Planets Around Other Stars	65
5.1	Planets Orbiting Neutron Stars	65
5.2	The Characteristics of Orbits	68
5.3	Planets Around Main-Sequence Stars; Doppler-Shift Detection	69
5.4	The Direct Imaging of Exoplanets	77
5.5	Exoplanets and the Solar System	82
5.6	Summary	83
6.	The Formation of Planets: The Capture Theory	85
6.1	The Interaction of a Star with a Protostar	86
6.2	The Interaction of a Star with a High-Density Region	90
6.3	Summary	93

7.	Orbital Evolution	95
7.1	The Nature of the Disk	96
7.2	The Force on a Planet Due to the Medium . . .	99
7.2.1	Viscosity-based resistance	99
7.2.2	Mass-based resistance	100
7.3	Modelling the Medium and Details of the Calculation Method	101
7.4	Calculations of Orbital Decay and Round-off	105
7.5	Orbits of High Eccentricity	107
7.6	The Range of Semi-Major Axes	113
7.7	Simple Ratios of Orbital Periods	113
7.8	Stellar Spin Axes	114
7.9	Summary	117
8.	The Frequency of Planetary Systems	119
8.1	Observations and Observational Constraints	119
8.2	Initial Formation Statistics	122
8.3	The Disruption of Planetary Systems	126
8.4	Summary	129
9.	Satellite Formation	131
9.1	Angular Momentum Considerations	132
9.2	The Form of the Disk	135
9.3	The Settling of Dust	137
9.4	The Formation of Satellitesimals	141
9.5	Satellite Formation	144
9.6	Comments	147
9.7	Summary	148
10.	Features of the Solar System	151
10.1	The Planets	151
10.1.1	The terrestrial planets	152
10.1.2	The major planets	154
10.1.3	Tilts of planetary spin axes	155

- 10.2 Satellites 157
 - 10.2.1 The satellites of Jupiter 158
 - 10.2.2 The satellites of Saturn 162
 - 10.2.3 The satellites of Uranus 167
 - 10.2.4 The satellites of Neptune 169
 - 10.2.5 Other satellites 171
- 10.3 Dwarf Planets and the Kuiper Belt 172
- 10.4 Asteroids 177
 - 10.4.1 Types of asteroids and their orbits 177
 - 10.4.2 The composition of asteroids 180
- 10.5 Comets 181
- 10.6 Summary 183

- 11. Interactions Between Planets 185
 - 11.1 The Precession of Planetary Orbits 185
 - 11.2 Close Interactions of Planets and the Tilts
of Spin Axes 186
 - 11.3 The Problem of the Terrestrial Planets 190
 - 11.4 Deuterium and the Major Planets 191
 - 11.5 Earth and Venus 196
 - 11.6 Summary 201

- 12. The Moon 203
 - 12.1 The Earth–Moon Relationship 203
 - 12.2 Satellites of the Colliding Planets 206
 - 12.3 Features of the Moon 208
 - 12.4 The Hemispherical Asymmetry of the Moon 212
 - 12.5 The Evolution of the Moon’s Orbit 215
 - 12.6 Summary 217

- 13. Mars and Mercury 219
 - 13.1 Larger Solid Bodies of the Solar System 219
 - 13.2 Mars as a Satellite 221
 - 13.2.1 The hemispherical asymmetry
of Mars 221

13.2.2	Mars — now and in the past	223
13.2.3	The Martian spin axis and hemispherical asymmetry	226
13.3	Mercury as a Satellite	228
13.4	The Orbits, Spins and Tilts of Mercury and Mars	232
13.5	Summary	233
14.	Neptune, Triton and Pluto	235
14.1	The Neptune–Pluto Relationship	235
14.2	The Strange Satellites of Neptune	235
14.3	The Neptune–Triton–Pluto Relationship Explained	237
14.4	Summary	239
15.	Dwarf Planets, Asteroids, Comets and the Kuiper Belt	241
15.1	Dwarf Planets	241
15.1.1	Ceres	241
15.1.2	The outer dwarf planets	242
15.2	Asteroids and Comets	245
15.2.1	Asteroids	245
15.2.2	Comets and the Kuiper Belt	248
15.2.3	Long-period comets and the Oort cloud	249
15.2.4	The survival of the Oort cloud	251
15.3	Summary	252
16.	Meteorites: Their Physical and Chemical Properties	255
16.1	The Broad Classes of Meteorites	256
16.2	The Physical and Chemical Characteristics of Meteorites	258
16.2.1	Stony meteorites	258
16.2.2	Iron meteorites	262
16.2.3	Stony-iron meteorites	263

16.3	Interpreting the Physical Properties and Appearance of Meteorites	264
16.4	Summary	266
17.	Isotopic Anomalies in Meteorites	269
17.1	Isotopes and Anomalies	269
17.2	The Planetary Collision and Nuclear Reactions	271
17.3	Explanations of the Anomalies	275
17.4	Individual Isotopic Anomalies and How They Are Produced	275
17.4.1	The oxygen anomaly	276
17.4.2	The magnesium anomaly	279
17.4.3	Neon in meteorites	282
17.4.4	Anomalies associated with silicon carbide	284
17.4.4.1	Silicon in silicon carbide	284
17.4.4.2	Carbon and nitrogen in silicon carbide	286
17.4.4.3	Neon in silicon carbide	288
17.5	General Remarks Concerning Isotopic Anomalies	291
17.6	Summary	291
18.	Overview and Conclusions	295
18.1	What Constitutes a Good Theory?	295
18.2	Protostars and Stars	298
18.3	Creating the Conditions for the Capture-Theory Process	300
18.4	The Capture-Theory Process	301
18.5	The Frequency of Planetary Systems	302
18.6	Satellite Formation	303
18.7	The Tilts of Spin Axes of the Planets and Stars	303
18.8	A Planetary Collision — Earth and Venus	304

18.9	The Moon, Mars and Mercury	305
18.10	Neptune, Triton and Pluto	307
18.11	Small Bodies of the Solar System	307
18.12	The Characteristics of Meteorites	308
18.13	Conclusions	309
Appendix A: Angular Momentum		313
Appendix B: Equipotential Surfaces of a Tidally Distorted Star		316
Appendix C: The Instability of a Gaseous Filament		318
Appendix D: The Jeans Critical Mass		320
Appendix E: The Lynden-Bell and Pringle Mechanism		322
Appendix F: Grains in Molecular Clouds		324
Appendix G: The Structure of a Spiral Galaxy		328
Appendix H: The Centre of Mass and the Orbits of Binary Stars		330
Appendix I: The Doppler Effect		333
Appendix J: Atomic Energy Levels and Stellar Spectra		335
Appendix K: Stellar Masses from Observations of Binary Systems		338
Appendix L: Smoothed-Particle Hydrodynamics		341
Appendix M: Free-Fall Collapse		345

Appendix N: Fragmentation and Binary Characteristics	348
Appendix O: Spin Slowing Due to a Stellar wind	351
Appendix P: The Virial Theorem and Kelvin–Helmholtz Contraction	353
Appendix Q: The Lifetime of Stars on the Main Sequence	356
Appendix R: The Eddington Accretion Mechanism	358
Appendix S: The Mass and Orbit of an Exoplanet	360
Appendix T: Radiation Pressure and the Poynting–Robertson Effect	361
Appendix U: Active Stars and Their Effect on a Stellar Disk	364
Appendix V: The Structure and Decay of a Stellar Disk	369
Appendix W: The Formation of Exoplanets	372
Appendix X: Disrupting a Planetary System	376
Appendix Y: From Dust to Satellitesimals	383
Appendix Z: From Satellitesimals to Satellites	387
Appendix AA: The Tidal Heating of Io	391
Appendix AB: The Trojan Asteroids	395
Appendix AC: Orbital Precession	399

Appendix AD: The Temperature Generated by Colliding Planets	401
Appendix AE: Heating by Deuterium-Based Reactions	414
Appendix AF: The Thermal Evolution of the Moon	416
Appendix AG: The Abrasion of a Hemisphere of the Moon	420
Appendix AH: The Rounding-off of a Highly Eccentric Satellite Orbit	422
Appendix AI: Continental Drift on Mars	426
Appendix AJ: The Oort Cloud and Perturbing Stars	429
Appendix AK: Planetary Perturbation of New Comets	433
Appendix AL: Reactions and Decays	435
Appendix AM: Cooling and Grain Formation	440
<i>Index</i>	445
