<i>Preface</i>	v
<i>Acknowledgments</i>	vii
<i>List of Figures</i>	xvii
1. Dominant Balance	1
1.1 Introduction	2
1.2 Solutions Using Kruskal–Newton Diagrams	3
1.2.1 Third order	3
1.2.2 Non polynomial form	6
1.2.3 Higher order	8
1.2.4 Hidden points	10
1.3 Problems	12
2. Exact Solutions	15
2.1 Introduction	16
2.2 Constant Coefficients	17
2.3 Inhomogeneous Linear Equations	18
2.4 The Fredholm Alternative	20
2.5 The Diffusion Equation	22
2.6 Exact Solutions to Nonlinear Equations	23
2.7 Phase Plane Analysis	24
2.8 Problems	28
3. Complex Variables	31
3.1 Analyticity	32
3.2 Cauchy Integral Theorem	33
3.3 Series Representation	34

3.4	The Residue Theorem	35
3.5	Analytic Continuation	37
3.6	Inverse Functions	39
3.7	Problems	41
4.	Local Approximate Solutions	43
4.1	Introduction	44
4.2	Classification	44
4.2.1	Ordinary point	45
4.2.2	Regular singular point	45
4.2.3	Irregular singular point	48
4.3	Asymptotic Series	51
4.3.1	Properties	52
4.3.2	Truncation: A series about $x = 0$	54
4.3.3	Truncation: A series about $x = \infty$	56
4.3.4	Truncation: A series about $x = 0$	57
4.3.5	Asymptotic oscillation	61
4.3.6	Construction of asymptotic series	62
4.3.7	The error function	62
4.4	Origin of the Divergence	63
4.5	Improving Series Convergence	66
4.5.1	Shanks transformation	67
4.5.2	Euler summation	67
4.5.3	Borel summation	68
4.6	The Special Functions of Mathematical Physics	68
4.7	Problems	70
5.	Phase-Integral Methods I	73
5.1	Introduction	74
5.2	Solutions far from Singularities	77
5.3	Connection Formulae: Isolated Zero	78
5.4	Derivation of Stokes Constants	81
5.5	Rules for Continuation	83
5.6	Causality	85
5.7	Bound States and Instabilities	86
5.8	Scattering, Overdense Barrier	87
5.9	Scattering, Underdense Barrier	89
5.10	The Budden Problem	93
5.11	The Error Function	96
5.12	Eigenvalue Problems	97
5.13	Problems	101

6.	Perturbation Theory	105
6.1	Introduction	106
6.2	Eigenvalues of a Hermitian Matrix	107
6.3	Broken Symmetry Due to Tunneling	110
6.4	Problems	115
7.	Asymptotic Evaluation of Integrals	117
7.1	Introduction	118
7.2	End Point	119
7.3	Saddle Point	122
7.4	Finding an Integration Path	126
7.5	Problems	129
8.	The Euler Gamma Function	133
8.1	Introduction	134
8.2	The Stirling Approximation	135
8.3	The Euler–Mascheroni Constant	137
8.4	Sine Product Identity	138
8.5	Continuation of $\Gamma(z)$	140
8.6	Asymptotic $\Gamma(z)$	140
8.7	Euler Product for Γ	143
8.8	Integral Representation for $1/\Gamma(z)$	144
8.9	$\Gamma(nx)$	146
8.10	The Euler Beta Function	146
8.11	Problems	148
9.	Integral Solutions	151
9.1	Constructing Integral Solutions	152
9.1.1	Integration by parts	152
9.1.2	Asymptotic value of a series	154
9.1.3	Finding a discrete difference equation	157
9.1.4	Construction from a series	158
9.2	Causal Solutions	159
9.3	Comments	161
9.4	Problems	162
10.	Expansion in Basis Functions	165
10.1	Legendre Functions	166
10.1.1	Local analysis	166
10.1.2	Euler integral representation	167
10.1.3	Recurrence relations	169
10.1.4	Laplace integral representation	171
10.1.5	Generating function	173

- 10.1.6 Legendre polynomials 174
- 10.2 Orthogonal Polynomials 175
- 10.3 Wavelets 177
 - 10.3.1 Introduction 177
 - 10.3.2 Scaling function 178
 - 10.3.3 Wavelet basis construction 182
 - 10.3.4 Determining the expansion coefficients 184
 - 10.3.5 Examples 186
 - 10.3.6 Time–frequency analysis 190
- 10.4 Problems 193
- 11. Airy 195
 - 11.1 WKB Analysis 196
 - 11.2 Argand Plot of the Airy Function 198
 - 11.3 Fourier–Laplace Integral Representation 200
 - 11.4 Asymptotic Limits 201
 - 11.4.1 Large negative z 201
 - 11.4.2 Large positive z 204
 - 11.4.3 Small $|z|$ 206
 - 11.5 Mellin Integral Representation 207
 - 11.6 Matching Local Solutions 208
 - 11.7 The Wronskian 210
 - 11.8 Problems 211
- 12. Phase-Integral Methods II 213
 - 12.1 Introduction 213
 - 12.2 Stokes Phenomena and Integral Representations 214
 - 12.3 Scattering, Overdense Barrier 221
 - 12.3.1 WKB analysis 222
 - 12.3.2 Integral representation 223
 - 12.4 Scattering, Underdense Barrier 227
 - 12.4.1 Integral representation 228
 - 12.5 The Budden Problem 230
 - 12.5.1 WKB analysis 230
 - 12.5.2 Integral representation 232
 - 12.6 Bound state 236
 - 12.6.1 WKB analysis 236
 - 12.6.2 Integral representation 238
 - 12.7 Concerning Accuracy 241
 - 12.8 Conclusion 243
 - 12.9 Problems 246

13. Bessel	247
13.1 Local Analysis	248
13.1.1 Local at zero	248
13.1.2 Analytic continuation in ν	249
13.1.3 Local at infinity	250
13.2 WKB Analysis	250
13.3 Integral Representations	252
13.3.1 Fourier–Laplace representation	252
13.3.2 The Hankel functions	252
13.3.3 Asymptotic limits	253
13.3.4 Relation to Bessel and Neumann functions	255
13.3.5 The Wronskian	257
13.3.6 Sommerfeld integral representation	258
13.3.7 Mellin integral representation	261
13.4 Generating Function	262
13.5 Matching Local Solutions	262
13.6 Imaginary Argument	263
13.7 Gaussian–Bessel integrals	264
13.8 Problems	267
14. Weber and Hermite	271
14.1 Local Analysis at Infinity	272
14.2 Local Analysis at Zero	273
14.3 Euler Integral Representation	274
14.4 Fourier–Laplace Integral Representations	275
14.5 Orthogonality	279
14.6 The Wronskian	280
14.7 Mellin Integral Representation	281
14.8 Problems	283
15. Whittaker and Watson	285
15.1 Local Analysis at Infinity	286
15.2 Local Analysis at Zero	287
15.3 Euler Integral Representation	287
15.4 Relation Between $M_{\lambda,\mu}(z)$ and $W_{\lambda,\mu}(z)$	290
15.5 Fourier–Laplace Integral Representation	291
15.6 Mellin Integral Representation	292
15.7 Special Cases	294
15.7.1 The error function	294
15.7.2 The logarithmic integral function	295
15.8 Problems	296

- 16. Inhomogeneous Differential Equations 299
 - 16.1 The Driven Oscillator 300
 - 16.2 The Driven Weber Equation 301
 - 16.3 The Struve Equation 303
 - 16.3.1 Local analysis at zero 303
 - 16.3.2 Local analysis at infinity 304
 - 16.4 Resistive Reconnection 305
 - 16.5 Resistive Internal Kink 306
 - 16.6 A Causal Inhomogeneous Problem 307
 - 16.7 Driven Oscillator 312
 - 16.8 A Driven Overdamped Oscillator 313
 - 16.9 Stokes Modification of Boundary Conditions 316
 - 16.10 Inhomogeneous Weber equation 318
 - 16.11 Problems 324
- 17. The Riemann Zeta Function 327
 - 17.1 Introduction 328
 - 17.2 $\zeta(s)$ and $\zeta(1 - s)$ 329
 - 17.3 The Euler Product for $\zeta(s)$ 331
 - 17.4 Distribution of Prime Numbers 332
 - 17.5 Public Key Codes 336
 - 17.6 Stirling Revisited 338
 - 17.7 Problems 341
- 18. Boundary Layer Problems 343
 - 18.1 Introduction 344
 - 18.2 Layer Location 346
 - 18.3 Layer at Left Boundary 349
 - 18.4 Layer in Domain Center 352
 - 18.5 Layer at Right Boundary 354
 - 18.6 Nested Boundary Layers 356
 - 18.7 Inhomogeneous Equations 360
 - 18.8 Simplification through Expansion 364
 - 18.8.1 A corner layer 364
 - 18.8.2 Nested layers 365
 - 18.9 Coupled Equations 367
 - 18.10 The Nonlinear Cole Equation 372
 - 18.11 Failure of Asymptotic Matching 379
 - 18.12 Boundary Layers in the Complex Plane 381
 - 18.12.1 Crystal growth 381
 - 18.12.2 Viscous fingering 385

18.12.3 Model equation with $a = b = 0$	386
18.12.4 Model equation with $a \neq 0$ and $b = 0$	387
18.12.5 Model equation with $a \neq 0$ and $b \neq 0$	388
18.13 Problems	390
Appendix A. Lagrange's Theorem	393
Appendix B. Integral Solution for Eq. 18.129	395
<i>Bibliography</i>	397
<i>Index</i>	401
