<i>Preface</i>	v
1. Mathematical Concepts and Physical Objects	1
1.1 On the Foundations of Mathematics. A First Inquiry . . .	7
1.1.1 Terminological issues?	7
1.1.2 The genesis of mathematical structures and of their relationships – a few conceptual analogies	10
1.1.3 Formalization, calculation, meaning, subjectivity .	13
1.1.4 Between cognition and history: Towards new structures of intelligibility	17
1.2 Mathematical Concepts: A Constructive Approach	19
1.2.1 Genealogies of concepts	19
1.2.2 The “transcendent” in physics and in mathematics	23
1.2.3 Laws, structures, and foundations	31
1.2.4 Subject and objectivity	37
1.2.5 From intuitionism to a renewed constructivism . .	40
1.3 Regarding Mathematical Concepts and Physical Objects .	44
1.3.1 “Friction” and the determination of physical objects	45
1.3.2 The absolute and the relative in mathematics and in physics	47
1.3.3 On the two functions of language within the pro- cess of objectification and the construction of mathematical models in physics	48
1.3.4 From the relativity to reference universes to that of these universes themselves as generators of physi- cal invariances	51

1.3.5	Physical causality and mathematical symmetry	52
1.3.6	Towards the “cognitive subject”	55
2.	Incompleteness and Indetermination in Mathematics and Physics	57
2.1	The Cognitive Foundations of Mathematics: Human Gestures in Proofs and Mathematical Incompleteness of Formalisms	58
2.1.1	Introduction	58
2.1.2	Machines, body, and rationality	59
2.1.3	Ameba, motivity, and signification	61
2.1.4	The abstract and the symbolic; the rigor	62
2.1.5	From the Platonist response to action and gesture	65
2.1.6	Intuition, gestures, and the numeric line	69
2.1.7	Mathematical incompleteness of formalisms	73
2.1.8	Iterations and closures on the horizon	75
2.1.9	Intuition	78
2.1.10	Body gestures and the “cogito”	82
2.1.11	Summary and conclusion of part 2.1	83
2.2	Incompleteness, Uncertainty, and Infinity: Differences and Similarities Between Physics and Mathematics	85
2.2.1	Completeness/incompleteness in physical theories	85
2.2.2	Finite/infinite in mathematics and physics	93
3.	Space and Time from Physics to Biology	101
3.1	An Introduction to the Space and Time of Modern Physics	103
3.1.1	Taking leave of Laplace	103
3.1.2	Three types of physical theory: Relativity, quantum physics, and the theory of critical transitions in dynamical systems	105
3.1.3	Some epistemological remarks	111
3.2	Towards Biology: Space and Time in the “Field” of Living Systems	113
3.2.1	The time of life	113
3.2.2	More on Biological time	115
3.2.3	Dynamics of the self-constitution of living systems	120
3.2.4	Morphogenesis	124
3.2.5	Information and geometric structure	128

3.3	Spatiotemporal Determination and Biology	132
3.3.1	Biological aspects	132
3.3.2	Space: Laws of scaling and of critical behavior. The geometry of biological functions	133
3.3.3	Three types of time	136
3.3.4	Epistemological and mathematical aspects	139
3.3.5	Some philosophy, to conclude	143
4.	Invariances, Symmetries, and Symmetry Breakings	149
4.1	A Major Structuring Principle of Physics: The Geodesic Principle	149
4.1.1	The physico-mathematical conceptual frame	151
4.2	On the Role of Symmetries and of Their Breakings: From Description to Determination	158
4.2.1	Symmetries, symmetry breaking, and logic	158
4.2.2	Symmetries, symmetry breaking, and determina- tion of physical reality	161
4.3	Invariance and Variability in Biology	165
4.3.1	A few abstract invariances in biology: Homology, analogy, allometry	165
4.3.2	Comments regarding the relationships between in- variances and the conditions of possibility for life	169
4.4	About the Possible Recategorizations of the Notions of Space and Time under the Current State of the Natural Sciences	175
5.	Causes and Symmetries: The Continuum and the Discrete in Mathematical Modeling	181
5.1	Causal Structures and Symmetries, in Physics	182
5.1.1	Symmetries as starting point for intelligibility	186
5.1.2	Time and causality in physics	187
5.1.3	Symmetry breaking and fabrics of interaction	190
5.2	From the Continuum to the Discrete	195
5.2.1	Computer science and the philosophy of arithmetic	196
5.2.2	Laplace, digital rounding, and iteration	198
5.2.3	Iteration and prediction	201
5.2.4	Rules and the algorithm	203
5.3	Causalities in Biology	210
5.3.1	Basic representation	211

- 5.3.2 On contingent finality 215
- 5.3.3 “Causal” dynamics: Development, maturity, aging, death 216
- 5.3.4 Invariants of causal reduction in biology 218
- 5.3.5 A few comments and comparisons with physics 220
- 5.4 Synthesis and Conclusion 220
- 6. Extended Criticality: The Physical Singularity of Life Phenomena 225
 - 6.1 On Singularities and Criticality in Physics 227
 - 6.1.1 From gas to crystal 227
 - 6.1.2 From the local to the global 229
 - 6.1.3 Phase transitions in self-organized criticality and “order for free” 231
 - 6.2 Life as “Extended Critical Situation” 236
 - 6.2.1 Extended critical situations: General approaches 240
 - 6.2.2 The extended critical situation: A few precisions and complements 242
 - 6.2.3 More on the relations to autopoiesis 244
 - 6.2.4 Summary of the characteristics of the extended critical situation 245
 - 6.3 Integration, Regulation, and Causal Regimes 246
 - 6.4 Phase Spaces and Their Trajectories 250
 - 6.5 Another View on Stability and Variability 255
 - 6.5.1 Biolons as attractors and individual trajectories 255
- 7. Randomness and Determination in the Interplay between the Continuum and the Discrete 259
 - 7.1 Deterministic Chaos and Mathematical Randomness: The Case of Classical Physics 262
 - 7.2 The Objectivity of Quantum Randomness 265
 - 7.2.1 Separability vs non-separability 267
 - 7.2.2 Possible objections 269
 - 7.2.3 Final remarks on quantum randomness 273
 - 7.3 Determination and Continuous Mathematics 274
 - 7.4 Conclusion: Towards Computability 278

8. Conclusion: Unification and Separation of Theories, or the Importance of Negative Results	281
8.1 Foundational Analysis and Knowledge Construction . . .	281
8.2 The Importance of Negative Results	285
8.2.1 Changing frames	289
8.3 Vitalism and Non-Realism	292
8.4 End and Opening	297
<i>Bibliography</i>	299
<i>Index</i>	313
